UNITED NATIONS

Reports published by the International Narcotics Control Board in 2014

The *Report of the International Narcotics Control Board for 2014* (E/INCB/2014/1) is supplemented by the following reports:

Narcotic Drugs: Estimated World Requirements for 2015; Statistics for 2013 (E/INCB/2014/2)

Psychotropic Substances: Statistics for 2013; Assessments of Annual Medical and Scientific Requirements for Substances in Schedules II, III and IV of the Convention on Psychotropic Substances of 1971 (E/INCB/2014/3)

Precursors and Chemicals Frequently Used in the Illicit Manufacture of Narcotic Drugs and Psychotropic Substances: Report of the International Narcotics Control Board for 2014 on the Implementation of Article 12 of the United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988 (E/INCB/2014/4)

The updated lists of substances under international control, comprising narcotic drugs, psychotropic substances and substances frequently used in the illicit manufacture of narcotic drugs and psychotropic substances, are contained in the latest editions of the annexes to the statistical forms ("Yellow List", "Green List" and "Red List"), which are also issued by the Board.

Rapports publiés par l'Organe international de contrôle des stupéfiants en 2014

Le *Rapport de l'Organe international de contrôle des stupéfiants pour 2014* (E/INCB/2014/1) est complété par les rapports suivants:

Stupéfiants: Évaluations des besoins du monde pour 2015 – Statistiques pour 2013 (E/INCB/2014/2)

Substances psychotropes: Statistiques pour 2013 – Prévisions des besoins annuels médicaux et scientifiques concernant les substances des Tableaux II, III et IV de la Convention sur les substances psychotropes de 1971 (E/INCB/2014/3)

Précurseurs et produits chimiques fréquemment utilisés dans la fabrication illicite de stupéfiants et de substances psychotropes: Rapport de l'Organe international de contrôle des stupéfiants pour 2014 sur l'application de l'article 12 de la Convention des Nations Unies contre le trafic illicite de stupéfiants et de substances psychotropes de 1988 (E/INCB/2014/4)

Les listes à jour des substances sous contrôle international, comprenant les stupéfiants, les substances psychotropes et les substances fréquemment utilisées dans la fabrication illicite de stupéfiants et de substances psychotropes, figurent dans les dernières éditions des annexes aux rapports statistiques annuels ("Liste jaune", "Liste verte" et "Liste rouge") publiées également par l'Organe.

Informes publicados por la Junta Internacional de Fiscalización de Estupefacientes en 2014

El *Informe de la Junta Internacional de Fiscalización de Estupefacientes correspondiente a 2014* (E/INCB/2014/1) está complementado por los siguientes informes:

Estupefacientes: Previsiones de las necesidades mundiales para 2015; Estadísticas de 2013 (E/INCB/2014/2)

Sustancias Sicotrópicas: Estadísticas de 2013; Previsiones de las necesidades anuales para fines médicos y científicos de las sustancias de las Listas II, III y IV del Convenio sobre Sustancias Sicotrópicas de 1971 (E/INCB/2014/3)

Precursores y productos químicos frecuentemente utilizados para la fabricación ilícita de estupefacientes y sustancias sicotrópicas: Informe de la Junta Internacional de Fiscalización de Estupefacientes correspondiente a 2014 sobre la aplicación del artículo 12 de la Convención de las Naciones Unidas contra el Tráfico Ilícito de Estupefacientes y Sustancias Sicotrópicas de 1988 (E/INCB/2014/4)

Las listas actualizadas de las sustancias sometidas a fiscalización internacional, que comprenden estupefacientes, sustancias sicotrópicas y sustancias frecuentemente utilizadas para la fabricación ilícita de estupefacientes y sustancias sicotrópicas, figuran en las ediciones más recientes de los anexos de los formularios estadísticos ("Lista Amarilla", "Lista Verde" y "Lista Roja"), también publicados por la Junta.

Introduction

1. In addition to its annual report, the International Narcotics Control Board (INCB) publishes technical information in accordance with the following provisions of the Convention on Psychotropic Substances of 1971:

"Article 18. Reports of the Board

"1. The Board shall prepare annual reports on its work containing an analysis of the statistical information at its disposal, and, in appropriate cases, an account of the explanations, if any, given by or required of Governments, together with any observations and recommendations which the Board desires to make. The Board may make such additional reports as it considers necessary. The reports shall be submitted to the Council through the Commission, which may make such comments as it sees fit.

"2. The reports of the Board shall be communicated to the Parties and subsequently published by the Secretary-General. The Parties shall permit their unrestricted distribution."

2. The technical data are published for control purposes and to meet the needs of researchers, enterprises and the general public. Pursuant to the provisions of article 16, paragraph 4, parties are required to furnish to the Board annual statistical reports relating to the substances listed in Schedules I-IV of the 1971 Convention. The statistical data that parties to the 1971 Convention are required to furnish to the Board differ according to the Schedule in which a given substance is included. The individual tables of the present technical report are based on those data.

3. Data reported later than 1 November 2014 could not be taken into consideration in preparing this technical report.

4. Based on information received during a survey of needs of users of its technical report on psychotropic substances carried out in 2004 and 2005, the Board decided to make some modifications to the report beginning in 2005. Introductory notes were added before each statistical table to provide more detailed explanations on the information contained in the publication. Table IV, which presents the comparative analysis of the levels of calculated consumption for psychotropic substances, was expanded to include relevant information on two substances, namely buprenorphine and methylphenidate.

5. In 2012, the Board decided to modify the structure of its technical publication on psychotropic substances by moving some information to the annexes. The Board also decided to reduce the overall volume of the printed part of the publication by including the annexes in a CD-ROM* attached to the printed part of the publication. All information contained in the previous editions of the publication continues to be included in the publication, although in a different order (see page *iii*). Readers who wish to access the information contained in the annexes will have to make use of the attached CD-ROM. The entire publication, including the annexes, will also be available on the INCB website (www.incb.org).

*The CD-ROM contains the entire publication, including the annexes, and other selected INCB publications.

Table II. Receipt of statistics for 2013

Table II reflects the extent of compliance by Governments with the provisions of article 16 of the 1971 Convention in submitting to INCB annual statistical information for 2013. The table also shows to what extent Governments have voluntarily submitted additional information to INCB, pursuant to recommendations of the Board endorsed by the Economic and Social Council and by the Commission on Narcotic Drugs, that is, quarterly statistics on international trade in substances in Schedule II, and information on countries of destination of exports and countries of origin of imports of substances in Schedules III and IV (Council resolutions 1981/7, 1985/15 and 1987/30) and statistics on the consumption of psychotropic substances (CND resolution 54/6). The following symbols are used in table II:

A question mark (?) indicates that the statistical report for 2013 had not been received by 1 November 2014;

The letter "x" indicates that the substances listed in the relevant Schedule are under national control and that the competent administration has furnished for 2013 at least part of the required statistical information;

A dash (—) indicates that the substances listed in the relevant Schedule are under national control but no movement of the substances has been reported by the competent administration;

The letter "o" indicates that substances in Schedule II are neither imported into nor exported from the country or territory and therefore the Government was not requested by INCB to provide quarterly trade statistics;

Two dots (..) indicate that the competent administration was not able to furnish data on the substances in the relevant Schedule for 2013, mostly due to a lack of legislative and/or administrative measures enabling the data to be collected. If, however, a competent administration has supplied information on some of the substances listed in the respective Schedule, such cases are mentioned in a footnote.

Countries and non-metropolitan territories are listed in English alphabetical order; the names of territories are shown in italics. The names of countries and territories are those that were in official use at the time the data were collected (in 2013).

Table III. Defined daily doses for statistical purposes (S-DDD) for psychotropic substances

The term “defined daily doses for statistical purposes (S-DDD)”, which has replaced the term “defined daily doses (DDD)”, is used by INCB as a technical unit of measurement for the purpose of statistical analysis and is not a recommended prescription dose. Its definition is not free of a certain degree of arbitrariness. Certain psychotropic substances may be used in certain countries for different treatments or in accordance with different medical practices, and therefore a different daily dose could be more appropriate. The

indicated defined daily doses for statistical purposes should be considered approximate and subject to modifications if more precise information becomes available. The basis for the grouping of the substances was, as far as possible, the anatomical therapeutic chemical (ATC) classification system used in the Nordic Statistics on Medicines and recommended by the World Health Organization (WHO) for drug utilization studies. In addition, the grouping reflects the Schedules of the 1971 Convention.

Tetraepam — Tétrizepam	100.00	Zolpidem	10.00

^aBy its decision 56/1, the Commission decided to transfer *gamma*-hydroxybutyric acid from Schedule IV to Schedule II of the Convention on Psychotropic Substances of 1971. In accordance with article 2, paragraph 7 of that Convention, the decision became fully effective with respect to each Party on 4 December 2013. — Par sa décision 56/1, la Commission des stupéfiants a décidé de transférer l'acide *gamma*-hydroxybutyrique (GHB) du Tableau IV au Tableau II de la Convention de 1971 sur les substances psychotropes. Conformément au paragraphe 7 de l'article 2 de cette Convention, la décision a pris pleinement effet pour chaque Partie le 4 décembre 2013. — En virtud de la decisión 56/1, la Comisión decidió transferir el ácido *gamma*-hidroxibutírico de la Lista IV a la Lista II del Convenio sobre Sustancias Sicotrópicas de 1971. De conformidad con el artículo 2, párrafo 7, de ese Convenio, la decisión entró en vigor plenamente respecto de cada una de las Partes el 4 de diciembre de 2013.

^bIn the past, the Board calculated one S-DDD to be equal to 1.2 mg of buprenorphine, a measure that reflected the dosage units used for treatment of pain in the late 1990s. In view of the increasing use of higher dosage units of buprenorphine for the treatment of pain and opioid dependence, the Board decided to calculate, as of 2010, one S-DDD to be equal to 8 mg of buprenorphine. Data on buprenorphine expressed in S-DDD in this publication are therefore not comparable with the corresponding data shown for previous years. — Par le passé, l'OICS se fondait, pour la buprénorphine, sur une S-DDD de 1,2 mg, ce qui correspondait à la dose utilisée pour le traitement de la douleur à la fin des années 90. Considérant l'emploi de plus en plus fréquent de doses supérieures pour le traitement de la douleur et de la dépendance aux opioïdes, l'OICS a décidé de se fonder, à compter de 2010, sur une S-DDD de 8 mg. Les données relatives à la buprénorphine qui sont exprimées en S-DDD dans la présente publication ne sont donc pas comparables avec les données correspondantes qui figurent dans les publications des années précédentes. — Anteriormente la Junta calculaba que una S-DDD equivalía a 1,2 miligramos de buprenorfina, cantidad que reflejaba las unidades de dosificación utilizadas para el tratamiento del dolor a finales del decenio de 1990. Debido al uso cada vez más generalizado de unidades de dosificación de buprenorfina más altas para el tratamiento del dolor y la dependencia a los opioides, la Junta decidió calcular, a partir de 2010, que una S-DDD equivale a 8 miligramos de buprenorfina. Por tanto, los datos sobre la buprenorfina expresados en S-DDD en la presente publicación no son comparables a los datos correspondientes a años anteriores.

^aBy its decision 56/1, the Commission decided to transfer *gamma*-hydroxybutyric acid from Schedule IV to Schedule II of the Convention on Psychotropic Substances of 1971. In accordance with article 2, paragraph 7 of that Convention, the decision became fully effective with respect to each Party on 4 December 2013. — Par sa décision 56/1, la Commission des stupéfiants a décidé de transférer l'acide *gamma*-hydroxibutirique (GHB) du Tableau IV au Tableau II de la Convention de 1971 sur les substances psychotropes. Conformément au paragraphe 7 de l'article 2 de cette Convention, la décision a pris pleinement effet pour chaque Partie le 4 décembre 2013. — En virtud de la decisión 56/1, la Comisión decidió transferir el ácido *gamma*-hidroxibutírico de la Lista IV a la Lista II del Convenio sobre Sustancias Sicotrópicas de 1971. De conformidad con el artículo 2, párrafo 7, de ese Convenio, la decisión entró en vigor plenamente respecto de cada una de las Partes el 4 de diciembre de 2013.

^bIn the past, the Board calculated one S-DDD to be equal to 1.2 mg of buprenorphine, a measure that reflected the dosage units used for treatment of pain in the late 1990s. In view of the increasing use of higher dosage units of buprenorphine for the treatment of pain and opioid dependence, the Board decided to calculate, as of 2010, one S-DDD to be equal to 8 mg of buprenorphine. Data on buprenorphine expressed in S-DDD in this publication are therefore not comparable with the corresponding data shown for previous years. — Par le passé, l'OICS se fondait, pour la buprénorphine, sur une S-DDD de 1,2 mg, ce qui correspondait à la dose utilisée pour le traitement de la douleur à la fin des années 90. Considérant l'emploi de plus en plus fréquent de doses supérieures pour le traitement de la douleur et de la dépendance aux opioïdes, l'OICS a décidé de se fonder, à compter de 2010, sur une S-DDD de 8 mg. Les données relatives à la buprénorphine qui sont exprimées en S-DDD dans la présente publication ne sont donc pas comparables avec les données correspondantes qui figurent dans les publications des années précédentes. — Anteriormente la Junta calculaba que una S-DDD equivalía a 1,2 miligramos de buprenorfina, cantidad que reflejaba las unidades de dosificación utilizadas para el tratamiento del dolor a finales del decenio de 1990. Debido al uso cada vez más generalizado de unidades de dosificación de buprenorfina más altas para el tratamiento del dolor y la dependencia a los opioïdes, la Junta decidió calcular, a partir de 2010, que una S-DDD equivale a 8 miligramos de buprenorfina. Por tanto, los datos sobre la buprenorfina expresados en S-DDD en la presente publicación no son comparables a los datos correspondientes a años anteriores.

COMMENTS ON THE REPORTED STATISTICS ON PSYCHOTROPIC SUBSTANCES

Summary

The analysis contained in the present section of the technical publication on psychotropic substances is based on statistical data furnished by Governments. The quality of the analysis depends on the quality of the data provided.

Use of substances included in Schedule I of the Convention on Psychotropic Substances of 1971 should be limited to scientific research and, in certain cases, the manufacture of psychotropic substances in other schedules. The isolated use of some substances in Schedule I for the manufacture of other substances has declined in recent years.

Manufacture of methylphenidate and its use for the treatment of attention deficit hyperactivity disorder (ADHD) continued to increase worldwide. In 2013, global manufacture reached a new record of nearly 72 tons. The United States of America remained the leading manufacturer, accounting for 77 per cent of the total output. In 2013, the United Kingdom of Great Britain and Northern Ireland was the second largest manufacturer of the substance and accounted for almost 20 per cent of global output. The countries with the highest levels of reported per capita consumption for 2013 were, in descending order, Iceland, Belgium, Sweden, Canada, the United States, the Netherlands, Denmark, New Zealand, Chile and Germany.

Manufacture of amphetamines, which are the other central nervous system stimulants in Schedule II of the 1971 Convention, amounted to 47 tons in 2013, which represents 300 million defined daily doses for statistical purposes (S-DDD) less than in 2012. This development is due mainly to a decrease in the manufacture of amphetamine in the United States during the year. The United States remained the largest consumer of amphetamines in 2013 in absolute terms, as well as in terms of per capita consumption.

Buprenorphine, an opioid analgesic listed in Schedule III of the 1971 Convention, has been increasingly used since the late 1990s in the treatment of pain and in substitution treatment for opioid addicts. Global manufacture of buprenorphine reached a new record of 8.7 tons (1.1 billion S-DDD) in 2013. Global calculated consumption of the substance has also continued to grow, reaching 9.9 tons (1.2 billion S-DDD) in 2013. The United States remained the leading user of buprenorphine in 2013, followed by the United Kingdom, India, Australia, Germany, Belgium and France (in descending order). As in previous years, over 60 countries reported imports of buprenorphine.

A total of 35 benzodiazepines are currently under international control. Of those, 22 are classified as anxiolytics, while 12 are classified as sedative-hypnotics and are used in medical practice for pre-medication and the induction of general anaesthesia. Clonazepam is the only benzodiazepine that is used mainly as an anti-epileptic. Flunitrazepam, a sedative-hypnotic, is the only benzodiazepine that is listed in Schedule III of the 1971 Convention; the rest of the benzodiazepines are listed in Schedule IV. In 2013, 16 Governments reported manufacture of benzodiazepine-type anxiolytics and 12 Governments reported manufacture of benzodiazepine-type sedative-hypnotics; combined total reported manufacture of the two groups of benzodiazepines decreased in 2013. That decrease may be attributed to the fact that India, a major manufacturing country, did not provide the Board with its data on manufacture of benzodiazepines for 2013. Alprazolam and diazepam remained, in that order, the most manufactured psychotropic substances in terms of S-DDD. Italy continued to be the leading manufacturer of both groups of benzodiazepines in 2013. The combined total calculated consumption of the two categories of benzodiazepines increased by 5 per cent from the 2012 level, standing at 28.9 billion S-DDD in 2013.

Of the 12 barbiturates listed in Schedules II, III and IV of the 1971 Convention, the manufacture of five substances—phenobarbital, pentobarbital, butalbital, barbital and amobarbital (in

descending order of amount manufactured)—together accounted for an average of 99 per cent of the total annual manufacture of those barbiturates during the period 2009-2013. Phenobarbital remained the most widely manufactured barbiturate, accounting for 64 per cent of the total manufacture of all 12 barbiturates, followed by pentobarbital (16 per cent) and butalbital (9 per cent). China continued to be the major manufacturer, accounting for 63 per cent of total manufacture of the entire group of barbiturates. Other leading manufacturers in 2013 were the United States, Germany, the Russian Federation, Japan and Denmark, in descending order. International trade in a number of barbiturates has been declining during the past five years.

The 14 central nervous system stimulants listed in Schedule IV of the 1971 Convention are used mainly as anorectics or for the treatment of ADHD. Total reported manufacture of this group of substances, which had been on the rise during the period 2004-2012, decreased slightly from the 2012 level, standing at 2.3 billion S-DDD in 2013; the United States and Germany accounted for 39 per cent and 36 per cent, respectively, of the global total. In 2013, calculated consumption of stimulants in Schedule IV in the Americas remained the highest in the world. Levels of consumption continued their downward trends in both Asia and Europe, but they continued to increase in Africa and Oceania. The highest consumption rates, expressed in S-DDD per 1,000 inhabitants per day, were reported by the United States, followed by Chile and Costa Rica. Phentermine continues to be the most used substance in this group, accounting for nearly 86 per cent of calculated consumption.

Substances for which global manufacture or international trade in recent years amounted to less than 1 kg are not mentioned separately in the analysis below; however, the data on those substances are included in the relevant group totals, as applicable.

Substances listed in Schedule I of the 1971 Convention

1. Twenty-eight substances are listed in Schedule I of the Convention on Psychotropic Substances of 1971. The use of those substances should be prohibited, pursuant to the provisions of article 7 of the Convention, except for scientific and very limited medical purposes by duly authorized persons in medical or scientific establishments that are directly under the control of or specifically approved by their Governments. This restriction results from the fact that all substances in Schedule I are hallucinogens and/or central nervous system stimulants with very limited or no medical use. In line with this restriction, manufacture and stocks of, as well as trade in, those substances have been extremely limited, with the exceptions noted in the following paragraphs.

2. The 1971 Convention does not foresee use of the psychotropic substances in Schedule I by industry for the manufacture of non-psychotropic substances or products. However, until 2002, 2,5-dimethoxyamphetamine (DMA) was manufactured in the United States of America, exclusively for use in the manufacture of a non-controlled film dye, in amounts of several tons per year. Manufacture of DMA started to decline in 2002, owing to a decrease in the demand for photographic film, and stopped entirely in 2007. Global stocks of DMA, which have been depleted since 2008, stood at 7 grams at the end of 2013.

3. Another substance in Schedule I that is used by industry for the manufacture of non-psychotropic substances is *para*-methoxy-*alpha*-methylphenethylamine (PMA). During the past decade, Denmark reported intermittent manufacture of PMA, with quantities ranging from 24 to 71 kg, for use in the manufacture of tamsulosin, an active pharmaceutical ingredient that is not under international control. While there was still some limited manufacture of PMA in Denmark and the United States in 2012, no manufacture of PMA took place in 2013.

4. Use of the psychotropic substances included in Schedule I for the manufacture of psychotropic substances that are included in other schedules was reported only by the United States. In that country, isomers of tetrahydrocannabinol (THC) listed in Schedule I are used in the manufacture of *delta*-9-tetrahydrocannabinol, a psychotropic substance listed in Schedule II. Of the isomers in Schedule I, *delta*-8-tetrahydrocannabinol is the main substance manufactured in the United States. During the past decade, reported manufacture in the United States of isomers of THC listed in Schedule I fluctuated between 327 kg in 2005 and 53 kg in 2010. In 2013, the total amount of isomers of THC manufactured in the United States was 229 kg. At the end of 2013, global stocks of such isomers stood at 373 kg, the vast majority of which were held in the United States.

Substances listed in Schedule II of the 1971 Convention

5. Listed in Schedule II are 18 substances that have little to moderate therapeutic usefulness and whose liability to abuse constitutes a substantial risk to public health. The substances belong to the following groups: central nervous system stimulants, anti-emetics, hallucinogens, sedative-hypnotics, antitussives and antidepressants. In addition to their various applications in human and veterinary medicine, some of these substances are used in industry for the manufacture of other psychotropic substances or for conversion into non-psychotropic substances.

Central nervous system stimulants

6. Total manufacture of central nervous system stimulants listed in Schedule II fluctuated around an average of about 3.3 billion defined daily doses for statistical purposes (S-DDD) annually in the period 2004-2011, but increased significantly to 5.5 billion S-DDD in 2012 and remained at that level in 2013, as shown in figure 1. In 2013, the significant decrease in manufacture of amphetamine as compared with 2012 was offset by increases in the manufacture of dexamfetamine and methylphenidate¹ in the United States. In 2013, the United States accounted for 83 per cent of the total output of stimulants in Schedule II. Methylphenidate's share of total output of stimulants in Schedule II was 43 per cent, which is slightly higher than it was in 2012. Amphetamine and dexamfetamine accounted for 17 and 35 per cent, respectively, of total output. Together with methylphenidate, those substances accounted for 95 per cent of total combined output in 2013.

Amphetamines

7. Both optical isomers of amphetamine (levamphetamine and dexamphetamine) and their racemic mixture (amphetamine), as well as both optical isomers of metamfetamine (levomethamphetamine and metamfetamine) and their racemic mixture (metamfetamine racemate), are listed in Schedule II. Governments have provided statistical reports on amphetamine, dexamphetamine and metamfetamine to the International Narcotics Control Board (INCB) since the 1970s. Statistics for levamphetamine and levomethamphetamine have been available since 1986 and statistics for metamfetamine racemate since 1988, reflecting the different dates on which those substances were brought under international control in the context of the 1971 Convention.

¹Of the other stimulants in Schedule II (4-bromo-2,5-dimethoxyphenethylamine, fenetylline, methylphenidate, phencyclidine and phenmetrazine) only methylphenidate is manufactured and used in significant quantities.

8. The quantity of amphetamines listed in Schedule II that was manufactured worldwide in 2013 decreased slightly, to 47 tons (3.1 billion S-DDD), from the 50.5 tons (3.4 billion S-DDD) manufactured in 2012 (see figure 2).

Figure 1. Stimulants listed in Schedule II: total reported manufacture, by substance, 2004-2013

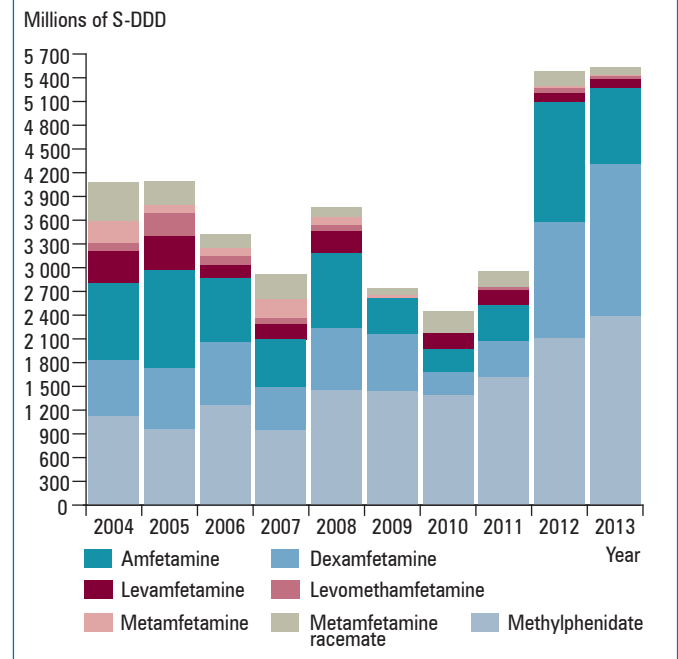

Figure 2. Amphetamines: total reported manufacture, by country, 2004-2013

As in 2012, the United States accounted for nearly 90 per cent of the global manufacture of amphetamine and almost all manufacture of dexamfetamine. In 2013, amphetamine comprised 31 per cent and dexamfetamine 57 per cent of the total output of amphetamines, while metamfetamine racemate and levamfetamine represented 3 per cent each, with the United States accounting for nearly 88 per cent of the total manufacture of amphetamines, France for 11 per cent and Germany and the Czech Republic, in descending order, for most of the remainder.

Use as intermediate substances

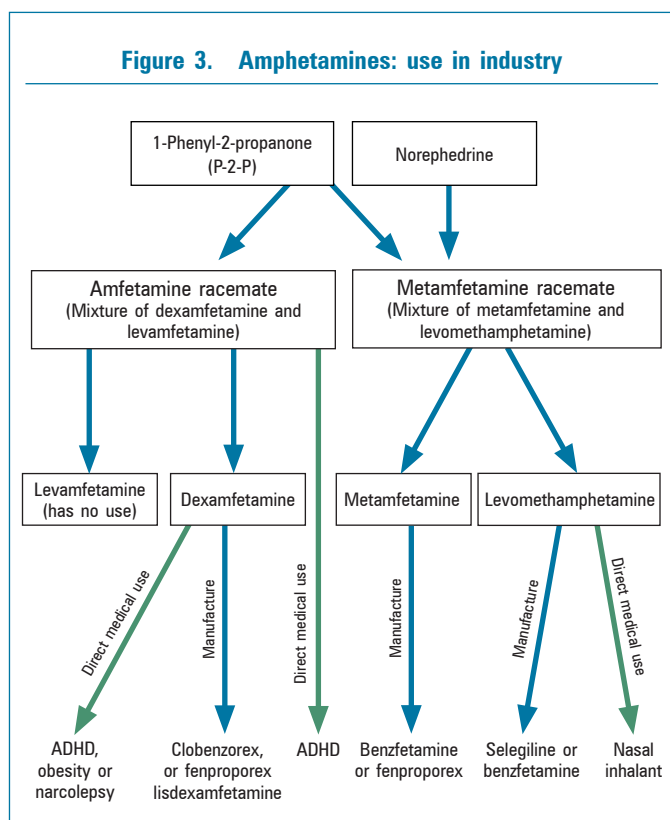

9. Amphetamines in Schedule II of the 1971 Convention are frequently used in industry as intermediary products for the manufacture of other substances (see figure 3). The new substances manufactured from amphetamines may be divided into two groups: other psychotropic substances, including those which are optical isomers of the original substance; and substances not controlled under the 1971 Convention. In France and the United States, amphetamines in Schedule II are widely used in industry for conversion into other amphetamines included in that Schedule. In the United States, amphetamine is also used in the synthesis of lisdexamfetamine (l-lysine-d-amphetamine), a prodrug of dexamfetamine, which is used in the treatment of attention deficit hyperactivity disorder (ADHD). The United States regularly reports to the

Board quantities of lisdexamfetamine (a substance not under international control) manufactured per year. In 2013, about 13 tons of lisdexamfetamine were manufactured from 9.6 tons of amphetamine. Furthermore, some 357 kg of metamfetamine were converted into 321 kg of benzfetamine (a Schedule IV anorectic). In addition, amphetamines have mainly been converted into substances used as anorectics (benzfetamine, clobenzorex, fenproporex and levopropylhexedrine) and antiparkinsonian drugs (selegiline).

Direct medical use

10. For direct medical purposes, amphetamines are used mainly for the treatment of ADHD and narcolepsy. The extensive use of amphetamines for the treatment of obesity has been considerably reduced or discontinued in most countries. While the quantities of amphetamines used for direct medical purposes have been relatively small in most countries, the medical use of amphetamine and dexamfetamine in the United States has increased significantly, starting from the 1990s. However, reported consumption of these substances in the United States has followed a downward trend since 2011, which may be a sign of their gradual replacement by lisdexamfetamine, for which no data are reported to INCB. Use of amphetamine and dexamfetamine has increased in some other countries, notably Australia, Canada and Denmark. While France has traditionally been an important manufacturer of amphetamines, there is very limited medical use of amphetamines in that country, as almost all the amphetamines manufactured there are destined for export.

11. The countries with the highest levels of reported (i.e. data furnished by Governments) consumption and medical and industrial² uses of amphetamines, calculated on the basis of statistics provided for 2013³ and expressed in S-DDD per 1,000 inhabitants per day,⁴ are listed in tables 1 and 2, respectively, in order of their rate of use in 2013.

² Excluding use for the manufacture of other amphetamines and non-psychotropic substances.

³ The method used for calculating levels of consumption of psychotropic substances is presented in the explanatory note to table IV in part three of the present publication.

⁴ The list of S-DDD used in these calculations is presented in part one, table III, of the present publication.

Comments on amphetamines, by substance

12. After having peaked at 23 tons in 2012, global manufacture of amphetamine dropped to 14 tons in 2013. That sharp decline was the result of a 40 per cent decrease in output by the United States from the 2012 level, amounting to 12.2 tons in 2013. As in previous years, the United States and France were the main manufacturers, accounting for 85 and 15 per cent, respectively, of global output. Those two countries also remained the main exporters of the substance. Amphetamine is used mainly in combination with dexamfetamine in the United States. In 2013, that country reported consumption of 6.2 tons. Total imports of amphetamine in 2013 amounted to 94 kg, the main importers being Canada (60.7 kg), Chile (14.6 kg) and Israel (7 kg). The United States held about 79 per cent of global stocks of amphetamine (13.7 tons) in 2013.

13. Global manufacture of dexamfetamine has continued to increase and reached a new record level of 28.8 tons in

2013, most of it (99 per cent) manufactured in the United States. That country (13.8 tons) also held the largest share of global stocks in 2013 (14.6 tons). The United States remained the main user of dexamfetamine for medical purposes, reporting consumption of 9.2 tons for 2013. Such use was also reported by a number of other countries, including Canada (322 kg) the United Kingdom (66 kg) and the Netherlands (35 kg). Global exports amounted to 619 kg in 2013, of which the United States accounted for 439 kg, followed by France (121 kg) and the Netherlands (40 kg). As in 2012, about 25 countries reported imports of dexamfetamine in 2013. Australia and Canada reported the largest imports, accounting for 34 and 33 per cent of the global total, respectively, followed by the Netherlands, Sweden and the United Kingdom, in descending order, which together accounted for another 25 per cent of the total.

14. While in the two decades leading up to 2009, global reported manufacture of metamfetamine had averaged 2.9 tons annually, manufacture dropped to 442 grams in 2010 and, after a short recovery in 2012 (270 kg), almost came to a standstill in 2013, with only 107 grams reported to have been manufactured jointly by Japan and New Zealand. Global stocks decreased from 9.2 tons in 2012 to 8.8 tons in 2013, with France holding 8.2 tons and the United States 610 kg. Drawing from its stocks, the United States used 357 kg of metamfetamine to manufacture 321 kg of benzfetamine. Only small amounts of metamfetamine were imported in 2013. Croatia, having imported 62 grams of metamfetamine, was the main importer of the substance in 2013.

15. During the period 2004-2013, total reported manufacture of levomethamphetamine fluctuated between no output (2009-2010) and 4.3 tons in 2005. After a recovery in 2012 (1.1 tons), total output dropped to 614 kg in 2013, with the United States accounting for 496 kg and the Czech Republic for the remainder. In recent years, an average of about 460 kg of levomethamphetamine has been used annually in the United States for the manufacture of nasal inhalants for domestic use, which are exempted in that country from certain control measures, in accordance with article 3 of the 1971 Convention. In 2013, 346 kg of levomethamphetamine was used for that purpose.

16. About 1.5 tons of metamfetamine racemate was manufactured in 2013, mainly by France. About 80 per cent of the output of France was exported to the United States (1.2 tons), where it has either been converted into non-controlled substances or separated into levomethamphetamine and metamfetamine. Global stocks of metamfetamine racemate in 2013 stood at 3.7 tons, with most of it (77 per cent) held by the United States. International trade in the substance averaged 1.2 tons during the period 2011-2013, with the United States accounting for all imports.

Methylphenidate

17. The use of methylphenidate for medical purposes increased significantly in the 1990s. Methylphenidate is used for the treatment of ADHD, primarily in children. It is also prescribed for the treatment of narcolepsy. The increase in the manufacture and use of methylphenidate is mainly the result of developments in the United States, where the substance is frequently prescribed for the treatment of ADHD and also is heavily advertised, including directly to potential consumers. Since 2000, however, the use of methylphenidate for the treatment of ADHD has been rising sharply in many other countries as well. In recent years, concerns have been raised about increasing misuse of preparations containing methylphenidate in some countries.

18. Global manufacture of methylphenidate started to rise rapidly in the 1990s, in particular since 2010. In 2013, it reached a new record level of 71.6 tons (see figure 4). Since the 1990s, the United States has been the leading manufacturer of methylphenidate, increasing its output from 1.8 tons in 1990 to 10 tons in 1995 and then gradually increasing it further, to 61 tons in 2012; in 2013 it manufactured 55 tons. The decrease in output by the United States in 2013 was offset by increased manufacture in the United Kingdom (14 tons), the second largest manufacturer that year. The other countries reporting manufacture of methylphenidate in amounts exceeding 500 kg in 2013 were Switzerland (1.2 tons), Spain (809 kg) and

Canada (663 kg); their combined output accounted for less than 4 per cent of global manufacture. Most of the methylphenidate manufactured in the United States continued to be used domestically, although exports from that country have increased in recent years. Global stocks of methylphenidate have increased in tandem with the rise in manufacture, increasing to 71 tons in 2013. The United States accounted for 83 per cent of global stocks at the end of 2013.

19. Despite the fact that manufacture of methylphenidate has spread to several other countries, the medical requirements for methylphenidate outside the United States continue to be met mainly by imports. International trade in methylphenidate increased from 920 kg to 28 tons during the period 1994-2013. Switzerland was the main exporter of methylphenidate until 2006. Since 2007, however, the United States has been the leading exporter, accounting for 35 per cent of total exports in 2013. Other major exporting countries in 2013 were, in descending order, Switzerland (for re-export), the United Kingdom, Spain and Germany. The number of countries and territories importing methylphenidate for domestic consumption has been growing. In 2013, of the 97 countries and territories that reported imports of methylphenidate, 45 imported the substance in amounts exceeding 10 kg.

20. The calculated global consumption of methylphenidate has followed an upward trend since 2007, reaching a new record level of 72 tons (2.4 billion S-DDD) in 2013 (see figure 5). That increase was attributable mainly to

Figure 4. Methylphenidate: total reported manufacture, by country, 2004-2013

Figure 5. Methylphenidate: calculated consumption,^a by country, 2004-2013

^aStatistical data submitted by Governments are used to calculate the approximate global consumption in a given year, expressed in S-DDD.

developments in the United States, which has traditionally been the leading user of methylphenidate for the treatment of ADHD. In the United States, calculated consumption of methylphenidate increased from 946 million S-DDD in 2012 to 1.4 billion in 2013. The United Kingdom had the second-highest calculated consumption in 2013, with 427 million S-DDD. Those two countries accounted for 58 per cent and 18 per cent, respectively, of calculated global consumption of methylphenidate in 2013. Other main users of methylphenidate in 2013 were, in descending order, Canada, Germany, Brazil, the Netherlands, Sweden, Israel, South Africa, Australia and Mexico.

21. The countries and territories with the highest levels of reported (i.e. data furnished by Governments) and calculated consumption of methylphenidate (calculated on the basis of statistics provided for 2011, 2012 and 2013) are listed in tables 3 and 4, respectively, in order of their level of consumption in 2013 (expressed in S-DDD per 1,000 inhabitants per day).

Table 3. Methylphenidate: reported consumption rate, 2011-2013

Anti-emetics

delta-9-Tetrahydrocannabinol and its stereochemical variants

22. Global manufacture of *delta*-9-THC gradually decreased from 114 kg (3.8 million S-DDD) in 2009 to 54 kg (1.8 million S-DDD) in 2012, led by a decrease in manufacture by the United States, the largest manufacturer of the substance worldwide. In 2013, global output rose again, to 90 kg (3 million S-DDD), with the United States and Switzerland accounting for 43 kg and 42 kg, respectively, and Germany for the remainder. International trade in *delta*-9-THC dropped from 48 kg in 2012 to 4 kg in 2013. With 3.5 kg, Germany remained the largest exporter, while Austria (3 kg) became the main importer during that year.

23. Drawing from its stocks, the United States was the world's largest consumer, with reported consumption of 59 kg in 2013, followed by Germany (8 kg) and Austria (4 kg). At the end of 2013, global stocks stood at 222 kg, of which 180 kg was held by the United States, 27 kg by Switzerland and 12 kg by Germany.

Sedative-hypnotics

24. Of the four substances from the group of sedative-hypnotics in Schedule II, three of them, namely, *gamma*-hydroxybutyric acid (GHB), mecloqualone and methaqualone, are neither barbiturates nor benzodiazepines. While mecloqualone has been listed in Schedule II since the

adoption of the 1971 Convention, methaqualone, which was initially placed in Schedule IV, was moved to Schedule II in 1979 because of new information gathered over the years indicating its increased abuse potential and decreased medical usefulness. Both mecloqualone and methaqualone are no longer used in medical practice today. GHB, which was added to Schedule IV in 2001, was transferred to Schedule II in 2013. Secobarbital, the only barbiturate in Schedule II, was moved from Schedule III to Schedule II in 1988.

gamma-Hydroxybutyric acid

25. GHB is used in the treatment of narcolepsy and, more rarely, alcoholism. Reported manufacture of GHB increased steadily during the period 2006-2010, reaching a peak of 59 tons in 2010. After a significant drop to 12.4 tons in 2011, global manufacture recovered again and stood at 48.7 tons in 2013, the second-largest amount ever recorded for that substance. Those fluctuations were due mainly to fluctuations in manufacture by the United States, a leading manufacturer of the substance. In 2013, reported manufacture of GHB in the United States amounted to 42 tons. Germany remained the second main manufacturer of GHB in 2013, with 7 tons. Global stocks, which had dropped from 41 tons in 2011 to 24 tons in 2012, recovered slightly and stood at 26.4 tons in 2013. The United States remained the largest holder of those stocks (18.5 tons), followed by Germany (2.7 tons), Ukraine (1.9 tons) and the Russian Federation (1.1 tons).

26. In 2013, total reported imports amounted to 10.8 tons. Ukraine, Denmark and France (in descending order) were the main importers; altogether, 15 countries reported imports of GHB of at least 100 kg. The United States, Germany, the United Kingdom and Ukraine (in descending

order) were the leading exporters in 2013. Total calculated consumption fell from 56.3 tons in 2012 to 41.9 tons in 2013, owing mainly to reduced consumption by Italy. With 29.7 tons, the United States had the highest calculated consumption of GHB in 2013. Italy consumed 5.5 tons, Ukraine 1.8 tons and Germany 1.6 tons.

Secobarbital

27. Germany has been the main manufacturer of secobarbital since 2000. In 2013, Germany manufactured 835 kg, accounting for almost all of the global manufacture (841 kg), while Japan accounted for the remainder. As compared to 2012, global stocks of secobarbital in 2013 went up by 67 per cent, to 1,388 kg, with the majority held by Germany (64 per cent) and the United Kingdom (26 per cent).

28. Global trade volume increased from 750 kg in 2012 to 795 kg in 2013 (7.9 million S-DDD). Germany continued to be the leading exporter of the substance, while the United Kingdom remained the top importer. In terms of total calculated consumption, the United Kingdom, Germany and Sweden (in descending order) were the main users in 2013.

Antitussives

Zipeprol

29. The Republic of Korea, which had stopped manufacturing zipeprol in 1999, resumed its manufacture in 2008 and 2009, mainly for domestic consumption. Since 2010, no manufacture of the substance has been reported. The Plurinational State of Bolivia, the main importer of the substance in previous years, reported consumption of 2.4 kg for 2013.

Substances listed in Schedule III of the 1971 Convention

30. Nine substances are listed in Schedule III of the 1971 Convention. According to the scheduling criteria adopted by the World Health Organization (WHO), substances in Schedule III are those whose liability to abuse constitutes a substantial risk to public health and that have moderate to great therapeutic usefulness. One substance, cathine, belongs to the group of central nervous system stimulants. Six substances belong to the group of sedative-hypnotics: four barbiturates (amobarbital, butalbital, cyclobarbital and pentobarbital), flunitrazepam and glutethimide. The two remaining substances, buprenorphine and pentazocine, belong to the group of analgesics.

Central nervous system stimulants

Cathine

31. Cathine is used as a stimulant and for industrial purposes. Manufacture of cathine fluctuated considerably

during the period 2004-2012, varying between no output and a peak of 5.9 tons, which was reached in 2007. Until 2003, Germany was the only manufacturer of the substance. Other countries reporting manufacture of cathine in recent years were China and India. From 2007 to 2009, manufacture of cathine declined sharply to 55 kg, all of which was reported by China. In 2010, global output reached 800 kg, of which 500 kg was manufactured in India and 300 kg in China. No manufacture of the substance was reported for 2011, and only small amounts measured in grams were reported for 2012 and 2013. Global stocks of cathine have followed a downward trend since 2008, and decreased to 92 kg in 2013, held mainly in Germany and Switzerland.

32. India was the main exporter of cathine in the period 2009-2013, followed by Germany. Global exports of the substance averaged 1.2 tons annually during that time.

In 2013, reported global exports increased to 1.7 tons, with India accounting for 96 per cent of that total, and Germany and Switzerland for most of the remainder. The main importers of cathine in 2013, in descending order, were Mexico, South Africa, Switzerland, Egypt and Germany.

Sedative-hypnotics listed in Schedule III

33. Classified as sedative-hypnotics, barbiturates used to be prescribed for the treatment of anxiety and stress and, in some cases, as anaesthetics for short surgery interventions (ultra-short-acting substances). Nowadays, they are used mainly as anti-epileptics or for their selective anticonvulsant property. Barbiturates differ in speed of onset, duration of action and potency. Like benzodiazepines, barbiturates encountered on the illicit market have usually been diverted from licit circuits rather than synthesized in clandestine laboratories.

Amobarbital, butalbital, cyclobarbital and pentobarbital

34. During the period 2004-2013, global manufacture of amobarbital, butalbital, cyclobarbital and pentobarbital fluctuated between 0.7 billion S-DDD and 1.1 billion S-DDD. Global manufacture of those four substances has followed a downward trend since 2011 and decreased to 673 million S-DDD in 2013, mainly because of a substantial reduction of output by Denmark and moderate decreases in Germany and the United States. On the other hand, a slight increase

was reported by China, one of the leading manufacturers over the past few years. Compared with 2012, global manufacture of butalbital, cyclobarbital and pentobarbital dropped in 2013, the largest reduction being in pentobarbital, whereas manufacture of amobarbital increased significantly (see figure 6). As in previous years, manufacture in China, Denmark, Germany and the United States accounted for the bulk of the global total (91 per cent). Figure 7 shows the share of the main manufacturing countries in total output during the period 2009-2013.

35. After reaching a record high in 2011 (51.4 tons, or 514 million S-DDD), global manufacture of pentobarbital declined to 36.6 tons (366 million S-DDD) in 2013, largely because of a considerable decrease in output by the United States and Germany, which, as the top two manufacturers (in that order), together accounted for 87 per cent of the global total in 2013, followed by Denmark (9 per cent), Canada (3 per cent) and Japan (1 per cent). At 36 tons, total stocks of pentobarbital were above the 10-year annual average of 31 tons. Of that amount, about 33 per cent was held in the United States, 22 per cent in Germany and 15 per cent in France. In 2013, the largest user of pentobarbital continued to be the United States, followed by the United Kingdom, Germany, Canada, France and Australia, in descending order of total calculated consumption.

36. The total volume of imports of pentobarbital has followed a gradual upward trend, growing from 24 tons (237 million S-DDD) in 2005 to 38.4 tons (384 million S-DDD) in 2013. The Netherlands, France, Canada and

Figure 6. Barbiturates listed in Schedule III: total reported manufacture, by substance, 2004-2013

^aThe data for 2013 are incomplete.

Figure 7. Barbiturates listed in Schedule III: total reported manufacture, selected countries, 2009-2013

the United States (in descending order) accounted for more than half of global imports in 2013 (63 per cent). Germany remained the leading exporter, accounting for 42 per cent of global exports in 2013, about the same share as recorded for 2012, followed by the Netherlands (16 per cent) and the United States (13 per cent).

37. Following a significant decline in 2012 (from 40 tons in 2011 to 23 tons in 2012), global manufacture of butalbital decreased further, to 16.3 tons (217 million S-DDD) in 2013, mainly because of a substantial decrease in manufacture by Denmark, traditionally a leading manufacturer of the substance. On the other hand, moderate increases in output were recorded in Canada and the United States. Accounting for 71 per cent of global manufacture, the United States overtook Denmark in 2013 to become the leading manufacturer; its output was used mainly for domestic consumption. In the United States, 4.8 tons (63 million S-DDD) was used in 2013 for the manufacture of preparations exempted from certain control measures, in accordance with article 3 of the 1971 Convention. In 2013, global volume of trade stabilized at 30 tons (397 million S-DDD), with Denmark accounting for almost all of the total exports. The United States became the leading importer in 2013 (84 per cent), followed by Canada (10 per cent) and Italy (5 per cent). Global stocks of butalbital, which had reached over 42 tons in 2011, continued their downward trend and decreased to 16 tons in 2013, with about 54 per cent held in the United States, 29 per cent in Denmark and 12 per cent in Canada.

38. Global manufacture of amobarbital fluctuated strongly in the period 2004-2013, averaging 8.8 tons per annum. In 2013, total output amounted to 8.9 tons (89 million S-DDD). China remained the leading manufacturer, accounting for 79 per cent of global output, while the remainder was manufactured by Japan. Global stocks decreased slightly, from 947 kg in 2012 to 928 kg in 2013; they were held predominantly in China. Romania, which intermittently imports large quantities of amobarbital, became the leading importer in 2013, accounting for most of total imports (1.1 tons) in that year. Total calculated consumption rose to 8.9 tons; China (5.8 tons) remained the top consumer, followed by Japan and Romania.

39. Since 2004, cyclobarbital has been manufactured only in Poland. Global manufacture of cyclobarbital dropped from 484 kg (2.4 million S-DDD) in 2012 to 258 kg (1.3 million S-DDD) in 2013. Of that amount, Poland exported 156 kg (0.8 million S-DDD) in 2013, mainly to the Russian Federation and some other European countries. Accounting for 75 per cent of global imports in 2013, the Russian Federation continued to be the leading importer, with the remainder imported by Latvia (17 per cent) and Belarus (8 per cent).

Flunitrazepam

40. Flunitrazepam remains one of the most frequently abused benzodiazepines. The substance is diverted mainly from domestic distribution channels; preparations containing flunitrazepam have often been diverted from the licit market and smuggled into countries where there is an illicit demand for such preparations. Because it had frequently been diverted and abused, flunitrazepam was transferred from Schedule IV to Schedule III in 1995. Several countries, including major manufacturers and importers of the substance, have adopted strict control policies for flunitrazepam, in close cooperation with the pharmaceutical industry. Most of the preparations purportedly containing flunitrazepam that are sold on the illicit market are counterfeit products that do not contain that substance.

41. In medical practice, flunitrazepam, similarly to diazepam, has been used for pre-medication and for general anaesthesia. Prior to 1996, flunitrazepam was manufactured in several countries; from 1997 to 2008, only Italy and Switzerland reported its manufacture. Thereafter, some manufacture of flunitrazepam was also reported by several other countries, notably India. The manufacture of flunitrazepam in Switzerland, the main manufacturer of the substance, has fluctuated greatly; in some years, such as in 2005 and 2008, and during the period 2010-2011, no manufacture of the substance took place in that country. Those fluctuations are reflected in total global manufacture of flunitrazepam (see para. 84 and figures 20 and 21 below), which in 2013 stood at 1.8 tons, with Switzerland accounting for 74 per cent of that total. The only other countries reporting manufacture in 2013 were Italy (463 kg) and Japan (6 kg). Stocks of flunitrazepam held by manufacturers increased from 1.3 tons in 2012 to 2.1 tons in 2013, held mainly in Switzerland (87 per cent), Italy (9 per cent) and Brazil (1 per cent).

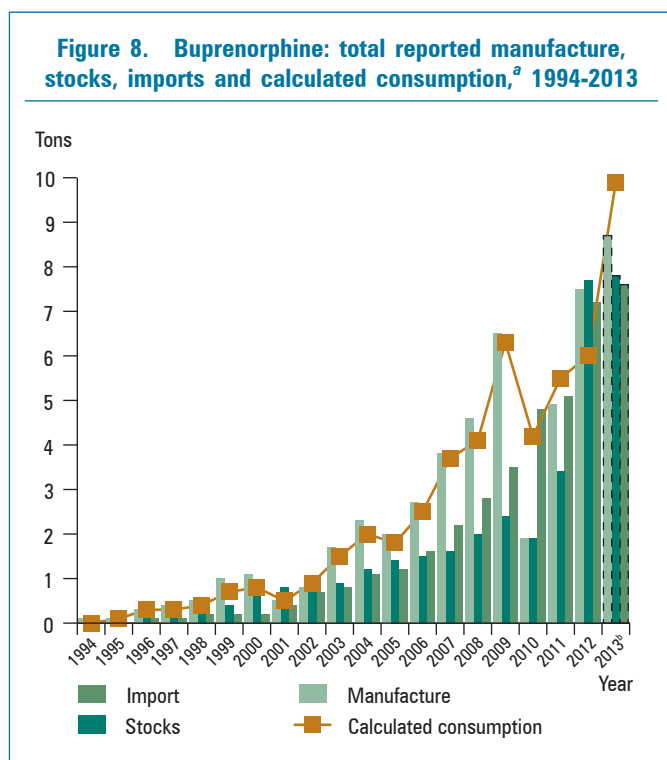

42. International trade in flunitrazepam averaged 1.1 tons per year during the five-year period 2009-2013, and stood at that amount in 2013. Italy and Switzerland were the leading exporters of flunitrazepam, together accounting on average for 91 per cent of global exports of the substance during the period 2009-2013. About 60 countries reported imports or use of flunitrazepam during the period 2009-2013. Japan remained the leading importer of flunitrazepam in 2013, importing 653 kg or 69 per cent of global imports of the substance. Brazil, Switzerland, Mexico, Nigeria, Germany and France (in descending order) reported imports ranging from 67 kg to 20 kg, accounting together for 24 per cent of global imports of the substance in 2013. Global calculated consumption of flunitrazepam decreased by 5 per cent from the level of 2012 and amounted to 859 kg (859 million S-DDD) in 2013, most of which was consumed in Japan (658 million S-DDD). Uruguay (20.7 S-DDD), Japan (14.3 S-DDD) and Austria (1.9 S-DDD) had the highest calculated rates of consumption measured in S-DDD per 1,000 inhabitants per day.

Analgesics listed in Schedule III

Buprenorphine

43. Buprenorphine belongs to the family of opioids used mainly as analgesics. As shown in figure 8, global manufacture of buprenorphine started to increase gradually beginning in the late 1990s, as the substance began to be used in higher doses for the treatment of pain and opioid addiction. After a significant drop in 2010, global manufacture increased again and attained a new record, with a total of 8.7 tons (1.1 billion S-DDD) in 2013 reported by nine countries, including the major manufacturing countries: United Kingdom (4 tons), United States (1.2 tons), Belgium (1 ton), Germany (770 kg), Czech Republic (700 kg), Switzerland (571 kg) and Australia (513 kg). Global stocks of the substance rose to 7.9 tons in 2013, the largest amount ever recorded. The majority of the stocks were held, in descending order, in the United States, the United Kingdom and Germany.

44. The volume of trade in buprenorphine has continued to increase since 1994, reaching a total of 7.6 tons in 2013, with over 60 countries reporting imports of the substance. Major importers in 2013 included the United States (4,194 kg), the United Kingdom (891 kg), Germany (840 kg) and France (526 kg). The United Kingdom (3,137 kg), the Czech Republic (868 kg), Belgium (675 kg),

Germany (615 kg), Switzerland (385 kg) and France (171 kg) were the major exporters in 2013, together accounting for 95 per cent of total global exports.

45. Global calculated consumption of buprenorphine has steadily increased since 2001, from 504 tons (63 million S-DDD) to a new record of 9.9 tons (1.2 billion S-DDD) in 2013. With 537 million S-DDD, the United States accounted for 43 per cent of global calculated consumption in 2013, followed by the United Kingdom (15 per cent), India (10 per cent), Australia (8 per cent), Germany (also 8 per cent), Belgium (4 per cent) and France (also 4 per cent). The calculated consumption of buprenorphine in S-DDD per 1,000 inhabitants per day is shown in part three, table IV.5, of the present publication. Buprenorphine is used in several countries in detoxification and substitution treatment programmes for opioid dependence, including Australia, Austria, Denmark, France, Germany, Hungary, Ireland, Malaysia, Switzerland and the United States. Diversions of preparations of buprenorphine, mainly from domestic distribution channels, have been reported by a few countries. Abuse of the substance, particularly among opioid addicts, has also been reported.

Pentazocine

46. Pentazocine is an opioid analgesic with properties and uses similar to those of morphine. Global total manufacture of the substance fluctuated during the period 2004-2012 between a low of 3.9 tons (19 million S-DDD) in 2006 and a high of 8.5 tons (42 million S-DDD) in 2009, mainly as a result of fluctuations in the total output of India and Italy, the two major manufacturing countries. In 2013, total manufacture of the substance dropped to 1,366 kg (6.8 million S-DDD). Of that total, 1,052 kg was manufactured in Italy and 283 kg in the United States. India, which had reported the manufacture of 5.5 tons of the substance for 2012, did not report manufacture of the substance for 2013. Global reported stocks of the substance continued their sharp fall, dropping from 5.7 tons in 2012 to 1.6 tons in 2013, as a result of the absence of stock data from India. Major users of the substance in 2013 included, in descending order of amounts used, India, the United States, Italy, Pakistan, Nigeria and Japan.

47. Global trade in pentazocine, which had shown a declining trend between 2009 and 2011, increased to 2.4 tons in 2013. The largest importers in 2013 were the United States, Nigeria and Pakistan, in that order, which together accounted for 64 per cent of global imports. Italy remained the largest exporter in 2013 (1,041 kg), followed by India, with 920 kg, and the United States, with 202 kg.

Substances listed in Schedule IV of the 1971 Convention

48. Sixty-one substances with various applications in medicine are listed in Schedule IV. They belong to the following groups: central nervous system stimulants (14 substances); benzodiazepine-type anxiolytics (22 substances); other anxiolytics (1 substance); benzodiazepine-type sedative-hypnotics (11 substances); benzodiazepine-type anti-epileptics (1 substance); barbiturate-type sedative-hypnotics and anti-epileptics (7 substances); other sedative-hypnotics (4 substances); and analgesics (1 substance).

Central nervous system stimulants

49. Fourteen central nervous system stimulants are listed in Schedule IV: amfepramone, aminorex, benzfetamine, etilamfetamine, fencamfamin, fenproporex, mazindol, mefenorex, mesocarb, pemoline, phendimetrazine, phentermine, pipradol and pyrovalerone. The stimulants in Schedule IV are essentially used as anorectics or for the treatment of ADHD.

50. Reported manufacture of central nervous system stimulants in Schedule IV was generally on the rise during the period 2004-2013, in spite of many fluctuations (see figure 9). Those fluctuations were mainly the result of developments in Brazil, Germany and the United States, which have traditionally been the main manufacturers. In 2013, global manufacture of this group of substances amounted to 2.3 billion S-DDD, the United States accounting for 39 per cent of the

global total, followed by Germany (36 per cent) and Italy (15 per cent) (see figure 10).

51. As in previous years, phentermine remained the most manufactured substance of this group of stimulants in 2013, when manufacture of phentermine (2 billion S-DDD) accounted for 87 per cent of total reported manufacture of all stimulants in Schedule IV; the reported manufacture of mazindol (137 million S-DDD) accounted for 6 per cent, fenproporex (79 million S-DDD) for 4 per cent, amfepramone (50.8 million S-DDD) for 2 per cent and phendimetrazine (30 million S-DDD) for 1 per cent (see figure 11). Reported manufacture of the other central nervous system stimulants in Schedule IV (benzfetamine, etilamfetamine, pemoline and pipradol) accounted each for less than 1 per cent of total reported manufacture. No manufacture has been reported for the other stimulants in Schedule IV (aminorex, fencamfamine, mefenorex, mesocarb and pyrovalerone).

52. The fluctuations in total calculated global consumption of central nervous system stimulants listed in Schedule IV reflect mainly changes in the use of phentermine in the United States and the use of amfepramone and fenproporex in Brazil. A total of 1.95 billion S-DDD of central nervous system stimulants listed in Schedule IV were used in 2013. Of those, phentermine (1.67 billion S-DDD) accounted for 86 per cent, followed by mazindol (168.9 million S-DDD, or 8 per cent), amfepramone (57.8 million S-DDD, or 3 per cent) fenproporex (34 million S-DDD, or

Figure 9. Central nervous system stimulants listed in Schedule IV: total reported manufacture, by substance, 2004-2013

Figure 11. Central nervous system stimulants listed in Schedule IV: share of total reported manufacture, selected substances, 2013

Figure 13. Central nervous system stimulants listed in Schedule IV: average national consumption,^a by region, 2005-2013

^aStatistical data submitted by Governments are used to calculate average annual consumption for a three-year period.

Figure 12. Central nervous system stimulants listed in Schedule IV: calculated global consumption,^a by substance, 2004-2013

^aStatistical data submitted by Governments are used to calculate the approximate global consumption in a given year, expressed in S-DDD.

2 per cent) and phendimetrazine (16 million S-DDD, or 1 per cent) (see figure 12). About 70 per cent of global calculated consumption of stimulants in Schedule IV in 2013 was accounted for by the United States (1.36 billion S-DDD), followed, in descending order, by Mexico, Argentina, Germany, Italy, South Africa and Chile.

53. Calculated consumption of stimulants in Schedule IV in the Americas remained the highest in the world, at approximately the same levels as a decade ago (see figure 13). Decreases in the use of stimulants in Brazil since 2006 have been almost offset by rising consumption levels in the United States, although use in the United States decreased somewhat in 2012 and 2013. While levels of consumption continued their downward trend in Asia and Europe, they continued to increase in Africa and particularly in Oceania. In Asia, the decrease in consumption levels is attributable mainly to the lower consumption levels of phendimetrazine in the Republic of Korea. In Africa, the increase in consumption levels is mainly a result of greater consumption of phentermine and phendimetrazine in South Africa. In 2013, the highest consumption rates, expressed in S-DDD per 1,000 inhabitants per day, were reported by the United States (13.9 S-DDD), followed by Chile (2.7 S-DDD), Costa Rica (2.4 S-DDD), Malaysia (0.6 S-DDD) and the United Kingdom (0.3 S-DDD). Among the countries and territories that did not report consumption data, the highest calculated consumption rates, expressed in S-DDD per 1,000 inhabitants per day, were observed in Argentina (9.5 S-DDD), Mexico (4 S-DDD), Italy (3.9 S-DDD), Hong Kong Special Administrative Region (SAR) of China (3.3 S-DDD), Germany (3.2 S-DDD) and New Zealand (2.9 S-DDD).

54. Phentermine has always been the most commonly manufactured substance in the group of stimulants in Schedule IV. During the period 2004-2013, total reported manufacture of the substance increased gradually from 13 tons in

2005 to over 30 tons in 2011 and 2012. Total output decreased slightly in 2013 (29 tons) as a result of decreased output by the United States. That country (13 tons) accounted for 44 per cent of global output, followed by Germany (11.6 tons) and Italy (4.8 tons).

55. International trade in phentermine rose from 10.9 tons in 2010 to 18 tons in 2013. In recent years, the main exporter of the substance has been Germany, reporting almost half of all global exports in 2013 (9 tons), followed, in descending order, by Italy, Australia and New Zealand. The United States has been the main importer of phentermine in recent years, importing almost 8 tons in 2013. Imports of phentermine in quantities of more than 1 kg were reported in 2013 by 24 countries and territories.

56. Global manufacture of phendimetrazine decreased from 7.7 tons in 2010 to 2.1 tons in 2013. That decrease reflects developments in Italy, the main manufacturer of phendimetrazine in the period 2007-2013. China, another important manufacturing country, accounted for 422 kg in 2013, all of which was exported. Phendimetrazine manufactured in Italy is mainly destined for export. Global exports amounted to 2.3 tons in 2013, of which Italy accounted for 53 per cent and China for 47 per cent. Traditionally, the United States has been the main importer and user of the substance, followed by the Republic of Korea. In 2013, however, the only country other than the United States (630 kg) that reported imports of the substance was South Africa (32 kg). No imports of phendimetrazine have been reported by the Republic of Korea since 2010.

57. Total reported manufacture of amfepramone averaged 22 tons per year during the period 2004-2007, with Brazil, Italy and Switzerland the main manufacturing countries. Global manufacture started to decrease in 2008, and dropped from 10 tons in 2012 to 3.8 tons in 2013, mainly as a result of the substance not being manufactured in Brazil and Switzerland. Only three countries reported having manufactured amfepramone in 2013: Germany (2.5 tons), Italy (675 kg) and the United States (630 kg). Italy was the main exporter of amfepramone in 2013 (1 ton), followed by Switzerland (636 kg). The largest imports of amfepramone were reported by Germany (517 kg), Mexico (365 kg), Chile (237 kg) and the United States (170 kg). Twelve other countries reported imports of amfepramone in quantities of more than 1 kg in 2013.

58. Global reported manufacture of fenproporex has declined gradually since 2005, from 9.5 tons in that year to 1.6 tons in 2013. Brazil, the world's leading manufacturer up to 2011, did not report manufacture for 2012 and 2013. Belgium was the only country reporting manufacture of fenproporex in 2013 (1.6 tons). Total reported imports of the substance, which had averaged 3.4 tons per year during the period 2006-2010, dropped to 313 kg in 2012 but increased

again to over 2 tons in 2013, with most of it imported by Germany (1.6 tons) and Mexico (482 kg). Other importing countries in 2013, all from the same geographical region, included Chile, the Dominican Republic, El Salvador, Nicaragua and Panama.

59. In the period 2004-2013, the United States was the leading manufacturer of benzphetamine. Some manufacture was also reported intermittently by Ireland, Italy and Switzerland. In 2013, the United States accounted for almost all of global manufacture (321 kg). International trade in benzphetamine continued to decrease in 2013, with only the United States reporting imports of the substance (22.9 kg). The United States also remained the main consumer of benzphetamine in the period 2004-2013; for 2013 it reported consumption of 250 kg.

60. Argentina was the main manufacturer of mazindol in the decade leading up to 2013; it reported annual average output of 140 kg of the substance during the period 2004-2013. Brazil has intermittently manufactured mazindol, in amounts averaging 43 kg per annum. In 2013, Argentina was the only country manufacturing mazindol (137 kg). Of global stocks at the end of 2013 (118 kg), most were held by Brazil (100 kg). Total exports of mazindol amounted to 45 kg, with Brazil accounting for 34 kg and Mexico and Switzerland for the remainder.

61. In the period 2004-2012, global manufacture of pemoline fluctuated between 1.1 tons in 2004 and no manufacture from 2005 to 2007. In 2013, total manufacture increased to 401 kg, as compared to 387 kg in 2012. Those fluctuations reflected developments in the Netherlands, which has been virtually the only country manufacturing pemoline since 2008, and which has also been the main exporter. Stocks of pemoline declined steadily from 7.5 tons in 2004 to 62 kg in 2011, but then recovered and stood at 550 kg at the end of 2013. During the decade ending in 2013, imports of pemoline averaged 260 kg a year. In 2013, total imports of pemoline decreased to 21 kg, all by Chile, Switzerland and Uruguay. In addition to use as a stimulant, pemoline is used for the treatment of ADHD.

Benzodiazepines

62. Thirty-three benzodiazepines were listed in Schedule IV in 1984. Midazolam was added to Schedule IV in 1990 and brotizolam was added in 1995. Flunitrazepam was transferred from Schedule IV to Schedule III in 1995. During the decade ending in 2013, practically all countries and territories that reported to the Board manufactured or traded in benzodiazepines in quantities of more than 1 kg at least once. Benzodiazepines are frequently diverted for subsequent smuggling and abuse.

Benzodiazepine-type anxiolytics

63. Twenty-two benzodiazepines are generally classified as anxiolytics. In the past decade, total reported manufacture of this group of substances fluctuated between 20.3 billion and 29.9 billion S-DDD, averaging 24 billion S-DDD per year during the period 2004-2012 (see figure 14). Those fluctuations mainly reflect fluctuations in the manufacture of alprazolam and diazepam, the main substances in this group, which together accounted, on average, for about 60 per cent of the total in the period 2009-2013. Global manufacture of this group of substances amounted to 18.3 billion S-DDD in 2013, which was 14 per cent less than in 2012. The decline in 2013 is a result of the fact that data on manufacture of this group of substances from some countries, most importantly India, are lacking. In 2012, manufacture in India had accounted for 25 per cent of global manufacture of benzodiazepine-type anxiolytics.

64. In 2013, alprazolam accounted for 41 per cent (7.5 billion S-DDD) of total reported manufacture of benzodiazepine-type anxiolytics; diazepam for 23 per cent (4.2 billion S-DDD); lorazepam for 17 per cent (3 billion S-DDD); bromazepam for 7 per cent (1.3 billion S-DDD); oxazepam for 3 per cent; chlordiazepoxide for 2 per cent; and clobazam, clorazepate and nordazepam for 1 per cent each (see figure 15). The remaining substances in that group together accounted for 4 per cent of total reported manufacture. Up to 2007, fludiazepam had been intermittently manufactured in Japan; no manufacture of that substance

was reported for 2013. Nor was any manufacture of camazepam or pinazepam reported for 2013; small quantities of those substances were last manufactured in 1991 and 2011, respectively. As shown in figure 16, China, India and Italy were the leading manufacturers of benzodiazepine-type anxiolytics in the period 2004-2012. In 2013, owing to the absence of data from India for that year, Italy (8 billion S-DDD), the United States (2.7 billion S-DDD), China

Figure 15. Benzodiazepine-type anxiolytics: share of total reported manufacture, by substance, 2013

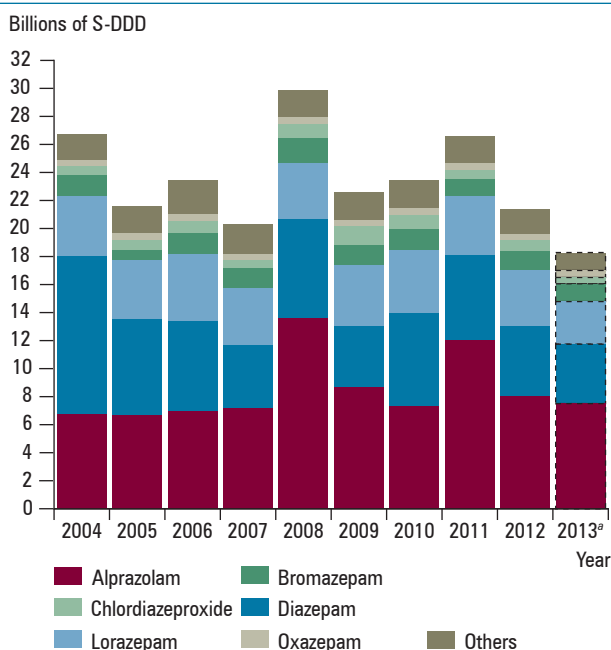

Figure 14. Benzodiazepine-type anxiolytics: total reported manufacture, by substance, 2004-2013

^aThe data for 2013 are incomplete.

Figure 16. Benzodiazepine-type anxiolytics: reported manufacture, selected countries, 2004-2013

^aThe data for 2013 are incomplete.

(1.9 billion S-DDD), Finland (1.8 billion S-DDD) and France (1.2 billion S-DDD) together accounted for 85 per cent of global manufacture of that group of substances (see figure 17).

65. Total approximate calculated consumption of benzodiazepine-type anxiolytics followed the overall trend in

Figure 17. Benzodiazepine-type anxiolytics: share of total reported manufacture, by country, 2013

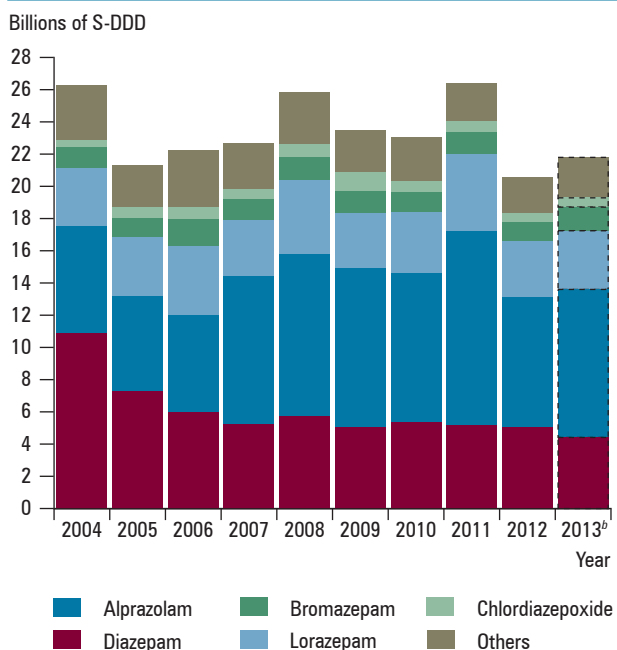

global manufacture. In 2013, the global calculated consumption for this group of substances amounted to 21.8 billion S-DDD (see figure 18). The United States, Brazil, Canada, France, Spain, Argentina and Italy (in descending order) were the largest consumers of this group of substances, in absolute terms, in 2013. The calculated consumption of benzodiazepine-type anxiolytics, expressed in S-DDD per 1,000 inhabitants per day, is shown in part three, table IV.3, of the present publication, with Uruguay (634 S-DDD), Finland (280 S-DDD), Ireland (230 S-DDD), Canada (94 S-DDD), Portugal (88 S-DDD), Hungary (80 S-DDD) and Argentina (63 S-DDD) having the highest rates. Until 2010, Europe was consistently the region with the highest calculated average national consumption rates for benzodiazepine-type anxiolytics (see figure 19). The sharp increase in consumption levels in Oceania during the period 2011-2013 was the result of a marked increase in the imports and calculated consumption of alprazolam in Australia for 2011.

Alprazolam

66. In 2013, total reported manufacture of alprazolam amounted to 7.5 tons, a decrease of approximately 6 per cent from the level of 2012. That decrease could be attributable mainly to the non-reporting of manufacture in 2013 by India, which had contributed 3.4 tons to global output in 2012. The main manufacturers of alprazolam in 2013 were the United States (2.5 tons), Italy (1.9 tons), Finland (1.6 tons) and France (785 kg), which together accounted for

Figure 18. Benzodiazepine-type anxiolytics: calculated global consumption,^a 2004-2013

^aStatistical data submitted by Governments are used to calculate average annual consumption for a three-year period, expressed in S-DDD.

^bThe data for 2013 are incomplete.

^aStatistical data submitted by Governments are used to calculate the average annual consumption for a three-year period.

91 per cent of global manufacture. They were followed by China (342 kg), Brazil (153 kg), Argentina (89 kg), Japan (70 kg), Canada (43 kg) and the Russian Federation (11 kg). In the period 2009-2013, global stocks of the substance were relatively stable, averaging 6.3 tons per year, and stood at 7.5 tons in 2013. In that year, the main holders of stock were, in descending order of amounts held, the United States, Italy, Finland, Brazil and France.

67. Alprazolam is available in many countries and all regions. Global exports have shown an upward trend during the past 10 years, rising from 6.3 tons in 2004 to over 10 tons in 2013. The main countries reporting exports of the substance in 2013 were, in descending order, India, Italy, the United States, France, Finland, Belgium and the United Kingdom, together accounting for 89 per cent of global exports. About 120 countries reported imports of the substance during 2013. The main importers of alprazolam continued to be the United States (2.2 tons), Italy (1.4 tons) and Belgium (604 kg), largely for re-export in all three cases. Those countries were followed, in descending order, by Argentina, Iran (Islamic Republic of), Switzerland, Hungary, France and Spain. Global calculated consumption, which had averaged 8.5 tons in the period 2004-2013, stood at 9.2 tons (9.2 billion S-DDD) in 2013. The countries having the greatest calculated consumption of alprazolam in absolute terms in 2013 were the United States (3.5 billion S-DDD), Canada (811 million S-DDD), Argentina (624 million S-DDD), Iran (Islamic Republic of) (536 million S-DDD), Brazil (354 million S-DDD) and Finland (332 million S-DDD). Finland (169 S-DDD), Canada (65 S-DDD), Hungary (60 S-DDD), Argentina (42 S-DDD) and Croatia (35 S-DDD) had the highest rates of calculated consumption measured in S-DDD per 1,000 inhabitants per day.

Diazepam

68. Diazepam continues to be the most traded substance in the group of benzodiazepine-type anxiolytics and is consumed in all regions of the world. Together with alprazolam, diazepam is among the benzodiazepines most often diverted and abused. Global reported manufacture of diazepam, which had fluctuated in the last decade between 113 tons in 2004 and 43.5 tons in 2009, fell in 2013 to its lowest level in those 10 years, 42.4 tons, mainly because no data on manufacture were submitted by India, a major manufacturer and exporter of the substance, which in 2012 had manufactured 7.2 tons of the substance. In 2013, Italy (21.8 tons), China (13.8 tons), Brazil (4.8 tons) and the United States (1.3 tons) accounted for 98 per cent of total reported manufacture. Global reported stocks of diazepam stood at 31.5 tons in 2013, held mainly (in descending order) in China, Denmark, Switzerland, Italy, Brazil, the United States and the United Kingdom.

69. International trade in diazepam has been fairly stable, averaging 59 tons annually during the 10-year period 2004-2013. In 2013, global exports of diazepam stood at 63.2 tons. Italy (21.6 tons) and China (17 tons) were the leading exporters of the substance in 2013, followed by Switzerland (5.3 tons), Denmark (4.4 tons), India (4.3 tons), Germany (3 tons) and the United Kingdom (2.1 tons). Those countries accounted together for 91 per cent of global exports in 2013.

70. Practically all countries and territories imported diazepam at least once in the period 2009-2013. Of 130 countries reporting imports of diazepam for 2013, the main importers were Denmark (7.1 tons), Switzerland (6.6 tons), the Democratic Republic of the Congo (5.6 tons) and the United States (5.4 tons). Ghana, Germany and Spain imported 4.7 tons, 3.6 tons and 2.6 tons, respectively. Global calculated consumption of diazepam continued to decrease and stood at 4.4 billion S-DDD in 2013. Brazil (626 million S-DDD), the Democratic Republic of the Congo (557 million S-DDD), the United States (528 million S-DDD) and Ghana (465 million S-DDD) had the highest calculated consumption of diazepam in 2013. Measured in S-DDD per 1,000 inhabitants per day, Ghana (51 S-DDD), Uruguay (30.5 S-DDD), the Democratic Republic of the Congo (22.5 S-DDD), Croatia (18.5 S-DDD) and Portugal (15 S-DDD) had the highest calculated rate of consumption in 2012.

Lorazepam

71. Total reported manufacture of lorazepam was fairly stable during the period 2004-2012, averaging 10.7 tons per year. In the recent past, Italy, Germany and India were the three main manufacturers of the substance. In 2013, total reported output of the substance decreased to 7.6 tons, of which Italy accounted for 73 per cent and Germany for 17 per cent. India had traditionally reported manufacture of lorazepam every year, with output of 1.7 tons reported for 2012; however, no manufacture data were reported by that country for 2013. The only countries other than Italy and Germany reporting manufacture of lorazepam in 2013 were the United States (305 kg), Canada (287 kg), Poland (80 kg), Brazil (58 kg), China (49 kg), Spain (22 kg) and Costa Rica (17 kg). Global reported stocks of lorazepam stood at 7.2 tons in 2013, held mainly, in descending order of amounts held, in Italy, the United States, Ireland, Germany and Canada.

72. In 2013, total reported exports of lorazepam stood at 10.3 tons, which was slightly less than in 2012. Italy, Germany, India, Belgium and Brazil, in descending order of amounts, were the main exporters of lorazepam in 2013, together accounting for approximately 92 per cent of total exports of the substance. About 60 countries reported

imports of lorazepam of more than 1 kg for 2013, the main importers being the United States (1.7 tons), Belgium (1.1 tons, mainly for re-export), Spain (1 ton), Ireland (925 kg), India (666 kg) and Argentina (612 kg): those main importers together accounted for 58 per cent of all reported imports of the substance. Brazil, France and Italy imported 567 kg, 545 kg and 513 kg, respectively. During the period 2004-2013, global calculated consumption averaged 3.9 billion S-DDD per year. In 2013, it amounted to 3.6 billion S-DDD, the highest levels being recorded for the United States (741 million S-DDD), Spain (405 million S-DDD), Ireland (358 million S-DDD), Italy (281 million S-DDD), Argentina (244 million S-DDD) and Canada (238 million S-DDD). In 2013, Ireland (217 S-DDD), Israel (30 S-DDD), Belgium (26.6 S-DDD), Spain (23.9 S-DDD), Portugal (23 S-DDD), Canada (19 S-DDD) and Lithuania (18.5 S-DDD) had the highest calculated rates of consumption, expressed in S-DDD per 1,000 inhabitants per day.

Bromazepam

73. During the period 2004-2013, total reported manufacture of bromazepam fluctuated significantly within the range of 7.3 tons (2005) and 18.3 tons (2008), averaging 13.6 tons per year. In 2013, total reported manufacture of bromazepam amounted to 12.7 tons, the main manufacturers remaining Italy (5.5 tons), Switzerland (4.4 tons) and Brazil (2.2 tons). India, another main manufacturer of bromazepam in the recent past, did not furnish manufacture data for 2013. Global reported stocks of bromazepam were fairly stable in the period 2009-2013, averaging 14.6 tons per year. As in 2012, most of the stocks in 2013 continued to be held in Switzerland, Italy, France and Brazil, in descending order of amounts held.

74. International trade in bromazepam was stable during the period 2004-2013, with global exports averaging 16.3 tons annually. In 2013, as in previous years, the main manufacturing countries (Italy and Switzerland) were also the leading exporters of the substance, jointly accounting for 77 per cent of total exports. About 100 countries reported imports of bromazepam in 2013, with 23 of those countries reporting imports of more than 100 kg. The Democratic Republic of the Congo (2.8 tons), Switzerland (2.5 tons, for re-export), France (2.1 tons, mainly for domestic consumption), Italy (1.1 tons, for re-export) and Germany (1 ton) were the main importers of bromazepam in 2013, jointly accounting for 55 per cent of total reported imports. Four other countries, namely, Pakistan (939 kg), Serbia (821 kg), Japan (764 kg) and Brazil (614 kg), accounted for 18 per cent of global imports in 2013. Global calculated consumption of bromazepam, which had been fairly stable during the period 2004-2013, averaging 1.3 billion S-DDD annually, rose to 1.5 billion S-DDD in 2013, the largest amount recorded in the past decade. The

Democratic Republic of the Congo (276 million S-DDD), Brazil (204 million S-DDD), France (199 million S-DDD), Pakistan (116 million S-DDD) and Serbia (79 million S-DDD) had the highest levels, in absolute terms.

Chlordiazepoxide

75. Since peaking in 2009 at 40.4 tons, total reported manufacture of chlordiazepoxide has decreased steadily, and dropped from 23.5 tons in 2012 to 13.4 tons in 2013. That decline may be attributable to the non-reporting of manufacture data for 2013 by India, a major manufacturer of chlordiazepoxide, which for 2012 had reported output of 9.9 tons. Italy, traditionally a main manufacturer of the substance, manufactured 9.9 tons in 2013 and China 3.3 tons. The only other country reporting manufacture for 2013 was Canada (301 kg). Global reported stocks of the substance stood at 12.1 tons in 2013, held mainly in China (4.1 tons) and Italy (3.9 tons), followed by Brazil, the United States and Switzerland, in that order.

76. Global exports increased from 16.9 tons in 2012 to 19.7 tons in 2013, the largest amount since 2009. Italy (9.3 tons), India (4.5 tons) and Switzerland (3.8 tons) were the largest exporters of chlordiazepoxide in 2013, jointly accounting for 89 per cent of global exports. About 130 countries reported imports of chlordiazepoxide in the five-year period 2009-2013. Iran (Islamic Republic of) (3.9 tons), Switzerland (3.8 tons), Cuba (3.4 tons), Egypt (1 ton), Pakistan (900 kg) and the United States (851 kg) were the main importers of the substance in 2013, accounting together for 76 per cent of the global total. Calculated global consumption of the substance increased from 533 million S-DDD in 2012 to 577 million S-DDD in 2013. The countries with the highest levels of consumption in 2013 were Iran (Islamic Republic of) (129 million S-DDD), Cuba (112.5 million S-DDD), China (75 million S-DDD), Italy (51.2 million S-DDD) and the United States (43.7 million S-DDD). Cuba, with 27.4 S-DDD, also had the highest rate of consumption measured in S-DDD per 1,000 inhabitants per day, followed by Iran (Islamic Republic of) (4.7 S-DDD), Italy (2.3 S-DDD), Iceland (2.0 S-DDD) and Bahrain (1.5 S-DDD).

Oxazepam

77. During the period 2004-2013, total reported manufacture of oxazepam fluctuated between 20.3 tons (2007) and 27.9 tons (2010), averaging 24.2 tons per year. Global reported manufacture of the substance went up from 22.7 tons in 2012 to 25 tons in 2013. Italy (23.8 tons), which manufactures the substance mainly for export, Canada (1.1 tons) and Poland (60 kg) were the main manufacturers of oxazepam in 2013, jointly accounting for almost all of global output. Global stocks increased from

18.2 tons in 2012 to 20.7 tons in 2013. The volume of international trade in oxazepam has fluctuated during the past decade, averaging 26.2 tons annually. Italy, with 20.5 tons, remained the main exporter in 2013, followed by India (2.2 tons), Germany (2 tons) and Poland (433 kg). Over 50 countries reported imports of oxazepam in 2013. The main importers of oxazepam, together accounting for 70 per cent of total global imports, were France (10.3 tons), Germany (3.6 tons), Australia (1.4 tons), Canada (also 1.4 tons) and the Netherlands (1.1 tons). Those were also the countries with the highest calculated consumption in 2013, in absolute terms. France (9.0 S-DDD), Finland (6.5 S-DDD), Iceland (5.8 S-DDD), Norway (5.7 S-DDD) and the Netherlands (4.6 S-DDD) were the countries with the highest rates of calculated consumption in 2013, measured in S-DDD per 1,000 inhabitants per day.

Clobazam

78. Total reported manufacture of clobazam fluctuated between 3.3 tons in 2009 and 6.8 tons in 2011, but decreased thereafter and stood at 4.2 tons in 2013. France (2.3 tons) and Germany (1.5 tons) remained the main manufacturers, and exporters, of the substance in 2013, while data on manufacture were missing from India, which had reported output of 806 kg in 2012. Global reported stocks decreased slightly from 4.7 tons in 2012 to 3.9 tons in 2013, held mainly in France, Germany, Brazil, Italy and Canada, in descending order of amounts held. International trade in clobazam was fairly stable in the past 10 years, global reported exports averaging about 5.4 tons per year during 2004-2013. Eighty-one countries reported imports of the substance in 2013, including India (798 kg, for re-export), Brazil (762 kg), France (699 kg), Bangladesh (372 kg), Argentina (280 kg), Pakistan (also 280 kg) and Japan (250 kg).

Clorazepate

79. Total reported manufacture of clorazepate continued its downward trend since 2009, declining steadily from 6.3 tons in that year to 3.4 tons in 2013. Whereas France and Italy were the leading manufacturers of the substance during the period 2004-2012, no manufacture was reported by Italy for 2013. France accounted for almost all of global manufacture in 2013. The only other country reporting manufacture was Canada (11 kg). International trade in clorazepate decreased from 5 tons in 2012 to 4 tons in 2013. Spain (1.8 tons), the United States (446 kg), France (296 kg) and Poland (211 kg) were the largest importers of clorazepate in 2013, while about 40 other countries reported imports of the substance during that year. Calculated global consumption declined from 215 million S-DDD in 2012 to 179 million S-DDD in 2013. As in 2012, Spain (52.7 million S-DDD) remained the largest consumer

in 2013, followed by France and the United States, with 46.3 million S-DDD and 17.8 million S-DDD, respectively.

Other anxiolytics

80. Owing mainly to developments in Switzerland, traditionally the main manufacturer of nordazepam, total reported manufacture of that substance during the period 2004-2012 ranged between 2.5 tons in 2012 and a peak of 14.2 tons in 2006. In 2013, total global manufacture of nordazepam amounted to 2.9 tons (192 million S-DDD), with Finland (2.5 tons) and France (410 kg) being the largest manufacturers. As in 2012, Switzerland did not manufacture nordazepam in 2013. Use of nordazepam remained limited to a dozen countries, notably Finland, France, Morocco and Belgium (in descending order of amounts used).

81. Global manufacture of tetrazepam plummeted from 21.8 tons in 2012 to 4.8 tons (48.1 million S-DDD) in 2013, mainly because of a significant drop in output by France and Italy, the two main manufacturers of that substance, and because Germany did not manufacture any of that substance that year. Total reported manufacture of prazepam, after having dropped from 6.2 tons in 2011 to a record low of 1.4 tons in 2012, increased again to 2.9 tons in 2013 (96 million S-DDD). These fluctuations reflect fluctuations in the output of the three manufacturers of the substance (India, Italy and Switzerland). Total reported manufacture of ethyl loflazepate amounted to 358 kg (179 million S-DDD) in 2013, with France and Japan being the only manufacturers in the last decade. Since 2004, India has been the only country reporting manufacture of pinazepam; as no manufacture data were submitted by India for 2013, global output for that year was recorded as zero. Likewise, there was no manufacture of camazepam, fludiazepam and halazepam in 2013. The combined manufacture of clotiazepam, cloxazolam, delorazepam, ketazolam, oxazolam and medazepam amounted to 382 million S-DDD in 2013.

Meprobamate

82. Meprobamate is the only non-benzodiazepine-type substance in Schedule IV that is used as an anxiolytic. The substance has gradually been replaced by benzodiazepines, leading to a substantial decline in manufacture, from 750 tons in the late 1970s and an annual average of 520 tons during the 1980s to an annual average of 290 tons during the 1990s. In the period 2004-2012, total manufacture of meprobamate fluctuated around an annual average of 170 tons, but dropped to 25.7 tons (21.4 million S-DDD) in 2013. That drop was attributable mainly to a sharp decrease in the output of China, which fell from 127 tons in 2012 to 25.5 tons in 2013. India, which has manufactured

meprobamate in significant quantities in the past decade, did not report such manufacture for 2013, and Denmark, which was one of the leading manufacturers up to 2010, has not manufactured it since 2012. Apart from China, the only other countries reporting manufacture of meprobamate in 2013 were Canada, reporting about 202 kg of manufacture, and the United States, accounting for less than 1 kg. Global stocks have continued their downward trend since 2009, falling to 24.2 tons (20.2 million S-DDD) in 2013. South Africa (15 tons), followed by China (4.2 tons), Lebanon (2 tons), France (also 2 tons), Canada (606 kg) and the United Kingdom (556 kg), together held 95 per cent of the global total.

83. China and India, with 21.6 tons and 14.8 tons of exports, respectively, remained the main exporting countries of meprobamate in 2013, jointly accounting for 83 per cent of global exports in that year. They were followed by France, South Africa and Switzerland, which together accounted for 7 per cent of global exports in that year. Total imports of meprobamate, which had declined steadily from 244 tons in 2007 to 137 tons in 2012, dropped to 47 tons in 2013, owing mainly to a sharp decrease in imports reported by South Africa, from 114 tons in 2012 to 18 tons in 2013. About 30 countries reported imports of meprobamate in 2013, major importers being South Africa (18 tons), the Democratic Republic of the Congo (7.1 tons), India (9 tons), the United States (2.5 tons) and Egypt (2.3 tons). France, Belgium, Switzerland, Algeria, Lebanon and the Syrian Arab Republic, in descending order of amounts imported, also reported imports of more than 1 ton in that year. In the decade leading up to 2013, global calculated consumption of meprobamate fluctuated between 348 tons in 2004 and 162 tons in 2011. Global calculated consumption of meprobamate decreased from 199 tons (166 million S-DDD) in 2012 to 60 tons (50 million S-DDD) in 2013, owing mainly to sharply decreased consumption by South Africa (a decrease of 92 tons, or 78 per cent, from the level of 2012). Nevertheless, South Africa remained the leading consumer of meprobamate in 2013, with 26 tons (22 million S-DDD), followed by the Democratic Republic of the Congo (7.1 tons), France (6.3 tons), Hungary (4.7 tons) and the United States (4.4 tons). Measured in S-DDD per 1,000 inhabitants per day, South Africa, Denmark, Hungary, Namibia, the Democratic Republic of the Congo, Belgium and France, in descending order, had the highest levels of calculated consumption in 2013.

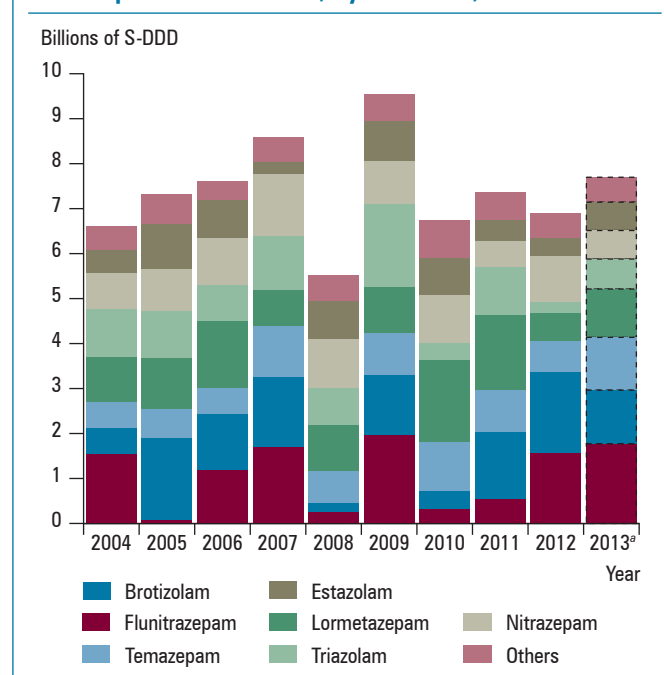

Benzodiazepine-type sedative-hypnotics

84. Twelve benzodiazepines are generally used as sedative-hypnotics: brotizolam, estazolam, flunitrazepam, flurazepam, haloxazolam, loprazolam, lormetazepam, midazolam,

nimetazepam, nitrazepam, temazepam and triazolam. Comments on flunitrazepam, a substance that was transferred from Schedule IV to Schedule III in 1995, are provided in paragraphs 40-42 above.

85. During the decade leading up to 2013, total reported manufacture of the 12 substances in the group of benzodiazepine-type sedative-hypnotics was 7.3 billion S-DDD per year, on average, fluctuating between 5.5 billion S-DDD in 2008 and 9.5 billion S-DDD in 2009, owing mainly to changes in output reported by Germany, Italy, Switzerland and the United States. In 2013, global reported manufacture of benzodiazepine-type sedative-hypnotics amounted to 7.7 billion S-DDD (see figure 20), which represents an 11 per cent increase over 2012. In 2013, the major manufacturers of this group of substances remained Italy (43 per cent), Switzerland (18 per cent), Germany (12 per cent), China (8 per cent) and Japan (also 8 per cent). Statistical data on manufacture for 2013 were not submitted by India, which had accounted for 7 per cent of global manufacture in 2012. Global stocks held by manufacturers increased in the past three years, and stood at 7.3 billion S-DDD in 2013, held mainly in Switzerland (26 per cent), Germany (22 per cent), Italy (18 per cent), the United Kingdom (8 per cent) and the United States (7 per cent). Calculated global consumption of this group of substances was less volatile than manufacture, fluctuating around an annual average of 8 billion S-DDD during the period 2004-2013. In 2013, calculated global consumption stood at 7.1 billion S-DDD (see figure 21).

Figure 20. Benzodiazepine-type sedative-hypnotics: total reported manufacture, by substance, 2004-2013

^aThe data for 2013 are incomplete.

Figure 21. Benzodiazepine-type sedative-hypnotics: calculated global consumption,^a 2004-2013

^a Statistical data submitted by Governments are used to calculate the approximate global consumption in a given year, expressed S-DDD.

^b The data for 2013 are incomplete.

Figure 22. Benzodiazepine-type sedative-hypnotics: average national consumption,^a by region, 2005-2013

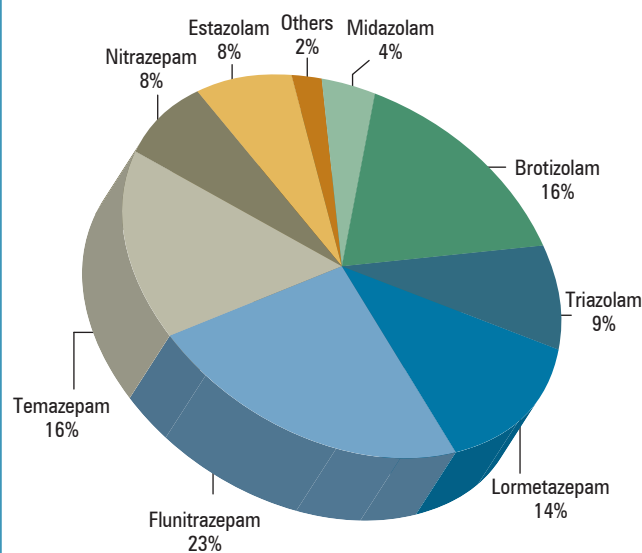

^a Statistical data submitted by Governments are used to calculate the average annual consumption for a three-year period.

86. Up to 2010, the calculated average annual consumption of benzodiazepine-type sedative-hypnotics, expressed in S-DDD per 1,000 inhabitants per day, was traditionally higher in Europe and in a few non-European countries, such as Japan and Cuba, than in other regions. In recent years, however, there have been significant changes in average annual consumption rates across regions (see figure 22). While average consumption rates in Oceania have been relatively stable in the past six years, at about 9 S-DDD per 1,000 inhabitants per day, consumption rates in Europe have shown a downward trend, from 25 S-DDD at the beginning of the decade, to 17.5 S-DDD. At the same time, consumption rates have steadily increased in Asia, from 16 S-DDD to 18 S-DDD, and in Africa, albeit at a low level (from 1 S-DDD to 2 S-DDD). In 2013, Belgium, Japan, Cuba, Spain and Italy, in that order, had the highest rates of consumption globally, with 66.7 S-DDD, 46.5 S-DDD, 33 S-DDD, 28.6 S-DDD and 25.2 S-DDD per 1,000 inhabitants per day, respectively. Calculated consumption levels of benzodiazepine-type sedative-hypnotics in individual countries, expressed in S-DDD per 1,000 inhabitants per day, are shown in part three, table IV.2, of the present publication.

87. The reported manufacture of individual substances in this group has varied greatly over the years, since manufacturers tend to produce large quantities of a substance at a time in order to keep stocks on hand for future use. There have been significant fluctuations in total manufacture of brotizolam, lormetazepam, temazepam and triazolam, in

Figure 23. Benzodiazepine-type sedative-hypnotics: share of total reported manufacture, by substance, 2013

particular, which has affected the total for the group as a whole. In 2013, flunitrazepam was the most manufactured substance in the group of benzodiazepine-type sedative-hypnotics, accounting for 1.8 billion S-DDD, or 23 per cent, of global manufacture of this group of substances (see figure 23). It was followed by brotizolam and temazepam,

Figure 24. Benzodiazepine-type sedative-hypnotics: total reported manufacture, by countries, 2004-2013

^aThe data for 2013 are incomplete.

Figure 25. Benzodiazepine-type sedative-hypnotics: total reported manufacture, by country, 2013

with an output of 1.2 billion S-DDD, or 16 per cent of global manufacture each, and by lormetazepam (1.1 billion S-DDD, or 14 per cent). Those substances were followed by triazolam (667 million S-DDD, or 9 per cent), nitrazepam (634 million S-DDD, or 8 per cent) and estazolam (630 million S-DDD, or 8 per cent) and midazolam

(307 million S-DDD, or 4 per cent). The remaining substances in this group together accounted for about 2 per cent of total manufacture in 2013: flurazepam (113 million S-DDD), loprazolam (119 million S-DDD) and nimetazepam (16 million S-DDD); no manufacture of haloxazolam was reported.

88. The main countries reporting manufacture of benzodiazepine-type sedative-hypnotics during the decade up to 2013 are shown in figure 24. Throughout that period, Italy was the leading manufacturer. In 2013, manufacture by that country increased by almost 30 per cent from the 2012 level; with 3.3 billion S-DDD, Italy accounted for 43 per cent of global reported manufacture of such substances in 2013 (see figure 25).

Brotizolam

89. Brotizolam is a potent hypnotic. Together with triazolam, it has the lowest S-DDD of all psychotropic substances (0.25 mg). Germany was the first country to report manufacture of brotizolam, in 1997. Since that year, the substance has usually been manufactured by Germany in amounts of several hundred kilograms per year and, to a much lesser extent, by Italy and Japan. Global reported manufacture of brotizolam stood at 298 kg in 2013. Germany (169 kg) and Japan (104 kg) remained the main manufacturers of the substance, while the remainder was manufactured by Italy. Global stocks stood at 307 kg (1.2 billion S-DDD) in 2013, almost entirely held in Germany. Germany also remained the main exporter of brotizolam in 2013, accounting for 141 kg, or 76 per cent of total exports of the substance. Japan remained the biggest importing country in 2013, accounting for 67 per cent of global imports. Eight other countries reported having imported more than 1 kg of brotizolam during that year. Global calculated consumption of brotizolam has remained stable, at about 1.3 billion S-DDD, during the past four years, with Japan and Germany accounting for 68 per cent and 26 per cent, respectively, in 2013.

Nitrazepam

90. Nitrazepam is a hypnotic drug, indicated for the short-term relief of severe, disabling anxiety and insomnia. Throughout the past 10 years, the main manufacturers of nitrazepam were China, India and Italy. In the period 2004-2012, global reported manufacture of this substance ranged between 2.9 and 6.9 tons per year. In 2013, global manufacture stood at 3.2 tons, of which Italy accounted for 2 tons, China for 1.1 tons and Canada for the remainder. India, which had been a major manufacturer of nitrazepam during the period 2004-2012, did not report manufacture data for 2013. Global stocks of nitrazepam have

gradually decreased in recent years, from 4.6 tons in 2009 to 1.7 tons in 2013. Reported exports of nitrazepam, which averaged 4.2 tons per year in the period 2004-2013, decreased from 5.1 tons in 2012 to 3.2 tons in 2013; Italy (1.7 tons) remained the main exporter of the substance, followed by China, with 850 kg, and India, with 353 kg. About 40 countries imported nitrazepam in quantities exceeding 1 kg in the past five years (2009-2013). Japan (29 per cent), Cuba (22 per cent), Bangladesh (5 per cent), Nigeria (also 5 per cent) and Romania (also 5 per cent), the United Kingdom (4 per cent) and Spain (3 per cent) were the main importers of nitrazepam in 2013. Global calculated consumption of nitrazepam, which averaged over 6 tons (1.2 billion S-DDD) annually during the period 2004-2010, decreased significantly in 2011 and fell to 3.1 tons (623 million S-DDD) in 2013, the lowest level in the past decade. Measured in S-DDD per 1,000 inhabitants per day, Cuba, Norway, Malta, Japan, Ireland and Croatia, in descending order, had the highest rates of calculated consumption in 2013.

Temazepam

91. Italy was the leading manufacturer and exporter of temazepam during the period 2000-2013. Canada, India, Poland, the United Kingdom and the United States reported intermittent manufacture of the substance for some of those years. Global reported manufacture of temazepam, which had fluctuated between 11.2 tons in 2004 and 22.6 tons in the past 10 years, rose to 23.5 tons in 2013, with Italy accounting for 93 per cent of the total. The only other manufacturers of the substance in 2013 were Canada (1,492 kg), Poland (242 kg) and the United States (36 kg). Global manufacturers' stocks of temazepam stood at 14.7 tons in 2013. Those stocks were held mainly in Italy, the United States, Canada, Finland, the Netherlands and the United Kingdom (in descending order). Global exports of temazepam, which averaged 19.3 tons per year during the period 2006-2012, stood at 19.6 tons in 2013. Eighteen countries imported temazepam in quantities exceeding 1 kg in 2013, with the United States remaining the largest importer (10.5 tons) and consumer of the substance. The other major importers of temazepam in 2013 were Canada (2 tons), Finland (1.2 tons), the United Kingdom (1 ton), the Netherlands (944 kg) and Australia (900 kg). Global calculated consumption of temazepam, which had dropped from 45.7 tons in 2004 to 16.4 tons in 2009, continued its upward trend and amounted to 19.2 tons in 2013. The United States accounted for 50 per cent of the total, while Canada, the United Kingdom, Italy, Australia, Pakistan and the Netherlands, in descending order, together accounted for 43 per cent. Measured in S-DDD per 1,000 inhabitants per day, Canada (10.7 S-DDD), the Netherlands (7 S-DDD), Australia (5.2 S-DDD) and the United States (4.2 S-DDD) had the highest rates of calculated consumption in 2013.

Lormetazepam

92. In the period 2004-2012, reported global manufacture of lormetazepam was consistently above 1 ton, except in 2007 (809 kg) and 2012 (608 kg). The fluctuations were the result of developments in Germany and Italy, the two main manufacturers and exporters of the substance. In 2013, global output of lormetazepam recovered again, reaching over 1 ton (1.1 billion S-DDD) in 2013. With 843 kg, Italy remained the main manufacturer of the substance, while Germany manufactured 230 kg in that year. Global manufacturers' stocks, which had averaged 1.4 tons in the period 2004-2011, decreased to 942 kg (942 million S-DDD) in 2013, held mainly in Germany (57 per cent), Italy (17 per cent) and Finland (16 per cent). The volume of international trade totalled 1.7 tons in 2013, with Italy (662 kg), Germany (491 kg), Finland (336 kg) and Spain (145 kg) jointly accounting for 95 per cent of global exports in that year. Twenty-two countries reported imports of lormetazepam in 2013, the main importers being Spain (582 kg), Finland (388 kg) and Belgium (243 kg). As in the past, some of those countries imported the substance mainly for re-export. The calculated global consumption, which had fluctuated in the past decade between 755 kg in 2006 and 2 tons in 2010, stood at 1.4 tons (1.4 billion S-DDD) in 2013. Rates of consumption continued to be particularly high in Europe, with the highest calculated rates of consumption, expressed in S-DDD per 1,000 inhabitants per day, recorded for Belgium (60.6 S-DDD), Spain (25.8 S-DDD), Finland (17.1 S-DDD), Andorra (16.2 S-DDD) and Italy (14.2 S-DDD).

Estazolam

93. Global manufacture of estazolam, which decreased steadily in the period 2008-2012 from 2.5 tons to 1.2 tons, recovered in 2013, amounting to 1.9 tons (630 million S-DDD). That increase in global output was attributable mainly to increased manufacture by China, the major manufacturer of the substance during the period 2004-2013, which more than doubled its output from the 2012 level. Other countries reporting manufacture of estazolam in 2013 were, in descending order, Japan, Poland, Italy and the United States. Total stocks of estazolam rose to 1.1 tons (362 million S-DDD) in 2013, the largest amount recorded in the period 2004-2013. Use of the substance outside the manufacturing countries has increased steadily since the 1980s, with international trade in 2013 reaching the highest level ever reported (407 kg). The leading exporters of estazolam have traditionally been Japan and Italy; in 2013, those two countries accounted for 46 per cent and 43 per cent of global exports, respectively. About 15 countries reported imports of estazolam in quantities exceeding 1 kg during the period 2009-2013. The main importing countries in 2013 were Italy (46 kg), Poland (35 kg), Japan (30 kg), the

United States (22 kg) and Portugal (20 kg), jointly accounting for 74 per cent of total imports of the substance. Global calculated consumption of estazolam, which had decreased in the past two years (2011-2012), increased again, from 533 kg (176 million S-DDD) in 2012 to 1.3 tons (437 million S-DDD) in 2013. Measured in S-DDD per 1,000 inhabitants per day, in 2013 Poland (5.4), Portugal (1.7) and Japan (1.4) had the highest rates of calculated consumption.

Midazolam

94. Global reported manufacture of midazolam, which had fluctuated significantly in the past decade between 2.7 tons (2006) and 8.7 tons (2005), averaging 5.9 tons annually during the period 2004-2013, stood at 6.1 tons in 2013. With almost 2 tons, or 32 per cent of global output, Switzerland was the largest manufacturer of midazolam. The other main manufacturers of the substance in that year, in descending order, were Israel, Brazil and Italy, which together accounted for 66 per cent of the total global output. India, another major manufacturer, which manufactured 1.2 tons in 2012, did not report manufacture data for 2013. Global reported exports of the substance, which had grown gradually since 2005, stood at 7.4 tons in 2013. As in previous years, Switzerland continued to be the main exporter of midazolam in 2013 (2.3 tons), accounting together with Israel and Italy for 62 per cent of the global total. Midazolam is used in many countries; about 80 countries reported imports of midazolam in quantities above 1 kg in the period 2009-2013. The main importer in 2013 was Switzerland (1.1 tons, entirely for re-export), followed by Germany (899 kg), Brazil (630 kg), the United States (508 kg) and France (479 kg). Together, those countries accounted for 54 per cent of global imports of the substance. After having reached a record amount in 2011 (9.6 tons), the calculated global consumption of midazolam decreased to 6.4 tons (322 million S-DDD) in 2013. Measured in S-DDD per 1,000 inhabitants per day, Sint Maarten (2.6 S-DDD), Switzerland (also 2.6 S-DDD), Curaçao (2.4 S-DDD), Uruguay (2.1 S-DDD) and Chile (1.9 S-DDD) were the countries and territories with the highest rates of calculated consumption of midazolam.

Triazolam

95. Global reported manufacture of triazolam fluctuated significantly during the period 2009-2013, between 460 kg in 2009 and 65 kg in 2012, mainly reflecting the manufactured quantities reported by the United States, which had been the leading manufacturer of triazolam throughout the past decade. In 2013, the global total increased to 167 kg (667 million S-DDD), of which the United States accounted for 105 kg, and Italy (55 kg) and Japan (6.5 kg) for the remainder. Total exports of triazolam in 2013 amounted to

162 kg. Italy (54 kg) and the United States (43 kg) continued to be the main exporters, followed by Belgium (19 kg), India (16 kg), Switzerland (15 kg) and France (13 kg). About 30 countries reported imports of triazolam in the period 2009-2013. Throughout the decade up to 2013, Japan was the biggest importer of triazolam; in 2013, Japan accounted for 38 per cent of global imports, followed by Italy (12 per cent), Belgium (11 per cent), Canada (10 per cent) and Switzerland (also 10 per cent). Total calculated consumption of triazolam stood at 988 million S-DDD in 2013, with the United States (570 million S-DDD), Japan (266 million S-DDD), Italy (97 million S-DDD) and Austria (22 million S-DDD) being the main consumers in absolute terms. Measured in S-DDD per 1,000 inhabitants per day, Austria (7.2 S-DDD), Japan (5.8 S-DDD), the United States (5 S-DDD) and Italy (4.4 S-DDD) had the highest calculated consumption rates of triazolam.

Flurazepam

96. Global reported manufacture of flurazepam decreased from 4.3 tons in 2012 to 3.4 tons in 2013. Italy continued to be the biggest manufacturer (3 tons), accounting for 88 per cent of total output during that year. The only other countries that reported manufacture in 2013 were Brazil (399 kg) and Canada (73 kg). Italy (2.8 tons) also remained the largest exporter of flurazepam in 2013, accounting for 79 per cent of total global exports (3.6 tons). Other major exporters in the same year were Spain (397 kg) and Germany (209 kg). The main importer of flurazepam continued to be Spain (1.1 tons), followed by the United States (397 kg), Germany (379 kg), Japan (291 kg) and Belgium (208 kg). Rates of consumption continued to be higher in Europe, with the highest calculated rates of consumption in 2013, expressed in S-DDD per 1,000 inhabitants per day, recorded for Belgium (1.8 S-DDD), Ireland (1.5 S-DDD), Spain (1.4 S-DDD), Portugal (1.3 S-DDD) and Switzerland (1.2 S-DDD).

Loprazolam

97. Total reported manufacture of loprazolam in 2013 amounted to 119 kg, all reported by France, which has traditionally been the main manufacturer and leading exporter of the substance. Global stocks amounted to 341 kg in 2013, with 77 per cent of them being held in the United Kingdom (261 kg) and the rest in France and Italy. In the past decade, small quantities were occasionally manufactured by India, the United Kingdom and the United States. Global reported exports of loprazolam increased by 13 per cent over 2012 and stood at 211 kg in 2013. About 40 countries used loprazolam in the period 2009-2013, the main importing countries in 2013 being Poland (83 kg), France (54 kg), Italy (20 kg) and South Africa (also 20 kg).

Other benzodiazepine-type sedative-hypnotics

98. The remaining substances in this group, nimetazepam and haloxazolam, are manufactured and used almost solely in Japan. In 2013, that country reported manufacture of 79 kg of nimetazepam, while no manufacture of or international trade in haloxazolam was reported for 2012 and 2013.

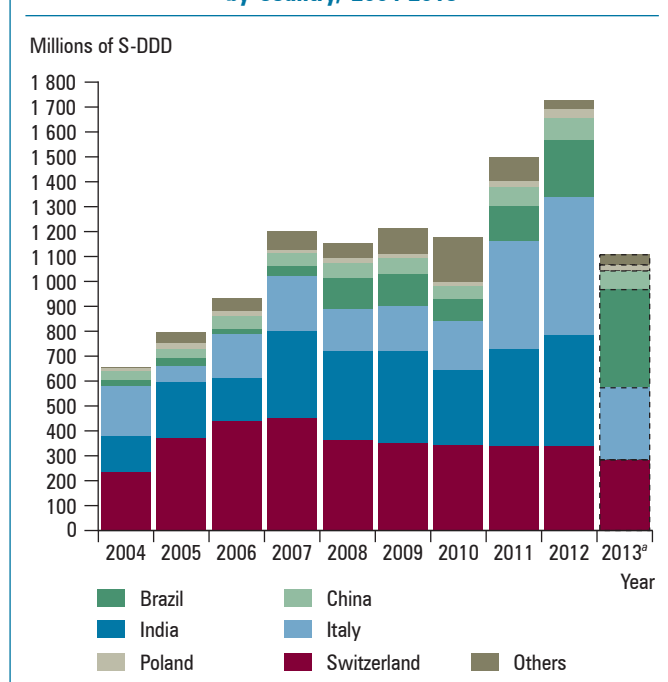

Benzodiazepine-type anti-epileptics

Clonazepam

99. Clonazepam is a benzodiazepine that is used mainly as an anti-epileptic. From 5.2 tons in 2004, global reported manufacture of clonazepam gradually increased to a new record of 13.8 tons in 2012, but decreased thereafter to 8.9 tons (1.1 billion S-DDD) in 2013. That decrease was attributable mainly to the non-reporting of manufacture data for 2013 by India, traditionally a major manufacturer of that substance, which had reported manufacture of 3.6 tons for 2012. While Switzerland was the world's leading manufacturer of clonazepam during the two decades leading up to 2010, Italy took the lead in 2011 and 2012. In 2013, Brazil became the largest manufacturer of the substance, with 3.2 tons, followed by Italy and Switzerland, accounting for 2.3 tons each. The other manufacturers of clonazepam in 2013 were China (600 kg), Poland (191 kg), Canada (164 kg), Argentina (105 kg), the United States (40 kg) and Costa Rica (19 kg) (see figure 26).

100. Total reported stocks of clonazepam remained stable and stood at 11 tons in 2013, 64 per cent of which were held in Switzerland (4.5 tons) and Brazil (2.5 tons). Global exports, which increased gradually from 6 tons in 2004 to a record high of 13 tons in 2011, stood at 11.3 tons in 2013. The main exporter of clonazepam in 2013 remained Switzerland (4.1 tons), followed by India and Italy, which together accounted for 82 per cent of the global total. About 120 countries reported imports of clonazepam in 2013, 6 of which imported more than 700 kg of the substance, both for domestic use and for re-export, namely, Brazil (1.7 tons), the United States (1.6 tons), Switzerland (1.5 tons), Spain (1 ton), Argentina (808 kg) and Mexico (710 kg). Use of clonazepam expanded from about 50 countries in 1995 to about 120 countries in 2013. Global calculated consumption of the substance, which had gradually increased over the past decade, amounted to 1.4 billion S-DDD in 2013, only slightly below the record amount of 1.5 billion S-DDD achieved in 2012. The countries with the highest levels of calculated consumption of clonazepam were Brazil (451 million S-DDD), the United States (139 million S-DDD), Argentina (106 million S-DDD), Mexico (88 million S-DDD), Israel (86 million S-DDD) and China (83 million S-DDD). Measured in S-DDD per 1,000 inhabitants per day, Israel (31.1 S-DDD), Saint Helena (13.7 S-DDD), Uruguay (10.5 S-DDD) and Argentina (7.1 S-DDD) had the highest rates of calculated consumption of clonazepam in 2013. The rates of calculated consumption of clonazepam in individual countries and territories, measured in S-DDD per 1,000 inhabitants per day, are shown in part three, table IV.4, of the present publication.

Figure 26. Clonazepam: total reported manufacture, by country, 2004-2013

^aThe data for 2013 are incomplete.

Barbiturate-type sedative-hypnotics and anti-epileptics listed in Schedule IV

Allobarbital, barbital, butobarbitol, methylphenobarbital, phenobarbital, secbutabarbitol and vinylbital

101. The seven barbiturates in Schedule IV are pharmacologically related to those in Schedule III. Five of the seven substances, namely, allobarbitol, barbital, butobarbitol, secbutabarbitol and vinylbital, are intermediate-acting barbiturates and are used mainly as hypnotics (to induce sleep). They are no longer used as daytime sedatives. The other two substances, methylphenobarbital and phenobarbital, have additional properties and are also used as anti-epileptics (long-acting barbiturates). Phenobarbital continued to be the most commonly used substance in this group in 2013, followed by barbital. More information on calculated consumption of phenobarbital is shown in part three, table IV, of the present publication.

102. Total annual reported manufacture of those seven barbiturates (for both direct medical use and the manufacture of non-psychotropic substances) rose from an average of 4 billion S-DDD in the period 1999-2000 to an average of 5.1 billion S-DDD in the period 2001-2006. After 2006, reported global manufacture started to decline, with fluctuations. In 2013, reported global manufacture plummeted from 4.3 billion S-DDD to 1.7 billion S-DDD. The reduction in the manufactured quantities of phenobarbital, which continued to be the most widely manufactured substance in this group, was the main reason for the changes in output. Substantial reductions were also recorded for the manufacture of butobarbital and secbutabarbital. In 2013, phenobarbital accounted for 90 per cent of the total manufacture (expressed in S-DDD), followed by barbital, which constituted approximately 10.3 per cent of total manufacture. Allobarbital, butobarbital and secbutabarbital together accounted for the remainder. No manufacture of methylphenobarbital was recorded for 2013, and no manufacture of vinylbital has been reported since 1996.

103. In 2013, the countries and territories with the highest calculated consumption rates of barbiturate-type sedative-hypnotics in Schedule IV were, in descending order, Sint Maarten, Italy, China, Switzerland, Japan, Israel, Thailand, France, Turkey and Germany, with consumption rates ranging between 0.45 and 0.03 S-DDD per 1,000 inhabitants per day. As for the barbiturate-type anti-epileptics listed in Schedule IV, the countries with the highest calculated consumption levels, in S-DDD per 1,000 inhabitants per day, were, in descending order, Brazil, Maldives, Cuba, Croatia and Ukraine. More information on calculated consumption is shown in part three, table IV, of the present publication.

104. Global manufacture of phenobarbital, which had fluctuated between 360 and 480 tons during the period 2004-2012, fell to a record low of 148 tons (1.5 billion S-DDD) in 2013. That decrease can mainly be attributed to a substantial decrease in the output of China (121 tons), the world's leading manufacturer of phenobarbital, which over the past decade manufactured an average of 258 tons per year. Furthermore, Hungary, which manufactured 84 tons in 2012, did not manufacture the substance in 2013, and India, which had manufactured 97 tons in 2012, did not submit manufacture data for 2013. The only other countries that reported significant manufacture of phenobarbital in 2013 were the Russian Federation (16 tons), followed by Japan (6.2 tons) and Germany (5.2 tons). For details on countries' reported manufacture, see figure 27. Global stocks of phenobarbital remained at the 2012 level (167 tons), with 36 per cent held by China, followed by Hungary and Ukraine (16 per cent each). In terms of total calculated consumption, major users of phenobarbital in 2013 included Brazil, the United States, Japan, Ethiopia, China, the Philippines and Italy (in descending order).

Figure 27. Phenobarbital: total reported manufacture, by country, 2004-2013

^aThe data for 2013 are incomplete.

105. Phenobarbital continues to be one of the most widely traded psychotropic substances, with an average of 140 countries trading in the substance every year. China, Hungary, India and Switzerland (in descending order) together accounted for 89 per cent of total exports in 2013. Global imports of phenobarbital decreased from 246 tons in 2012 to 239 tons in 2013. More than 120 countries reported imports of phenobarbital in 2013. Major importers of the substance included the Russian Federation (18 per cent), Ukraine (11 per cent), the United States (10 per cent), Switzerland (7 per cent), Brazil (6 per cent), Ethiopia (5 per cent) and Germany (also 5 per cent).

106. Global manufacture of barbital fluctuated strongly in the decade up to 2013, averaging 92 tons per year. In 2013, total output amounted to 86 tons (171 million S-DDD). China, the world's leading manufacturer, accounted for 83 tons and Japan, the other major manufacturer, for the remainder. The barbital manufactured in Japan was mainly for domestic consumption, including for use in the manufacture of non-psychotropic substances. Total calculated consumption of barbital increased from 7.2 tons in 2012 to 59 tons in 2013. China (50 tons) continued to be the major user of the substance; significant amounts were also used by Japan, Italy and Thailand (in descending order).

107. Total imports of barbital increased from 14 tons in 2012 to over 20 tons in 2013, largely because of increases reported by Germany and Japan. The leading importer, Germany, imported a total of 13 tons in 2013 and

re-exported 4.3 tons during the same year. Japan, as one of the major users of barbital, imported 2 tons in 2013. Furthermore, a combined total of 4.2 tons was imported by Italy, Thailand and France, in descending order. China, traditionally the world's largest exporter, accounted for 72 per cent of global exports in 2013, followed by Germany and Japan, with 21 per cent and 5 per cent, respectively.

108. During the period 2004-2012, global manufacture of methylphenobarbital fluctuated considerably, ranging between 10 kg (2011) and 22 tons (2008), mainly because of significant changes in the output reported by some manufacturing countries, namely, India, Switzerland and the United States. No manufacture of the substance was reported for 2013. Global stocks of methylphenobarbital continued to decline, from 5.9 tons in 2010 to 3.6 tons in 2013, with 95 per cent held in Switzerland. In terms of total calculated consumption, Croatia, Italy and Egypt, in descending order, were the main users of the substance in 2013.

109. Total volume of international trade in methylphenobarbital remained stable, at 1.6 tons in 2013. Croatia imported 900 kg, followed by Italy, Egypt and Switzerland; the latter three countries, in descending order, together accounted for 33 per cent of global imports. Switzerland was the top exporter in 2013, accounting for 1.3 tons, followed by Croatia, which re-exported 261 kg.

110. In the period 2004-2009, allobarbitol was manufactured intermittently by Belgium and Germany, in amounts of several tons per year. No manufacture was recorded for the period 2010-2012; in 2013, Canada was the only country reporting the manufacture of a small amount (178 grams). Global stocks of the substance continued their downward trend, decreasing steadily from 2.2 tons in 2007 to 652 kg in 2013. Half of the stocks were held in Jordan, followed by Germany (29 per cent), Turkey (16 per cent) and Israel (5 per cent). Total exports rose from 200 kg in 2012 to 450 kg in 2013. Germany was the leading exporter (250 kg) and Turkey was the leading importer (200 kg), while Switzerland imported and re-exported 200 kg in that year.

111. Manufacture of secbutabarbitol averaged about 60 kg per year in the period 2009-2013. After Germany stopped manufacturing secbutabarbitol in 2003, the United States became the only manufacturer. In 2013, the United States manufactured 51 kg of the substance, as compared to 94 kg in 2012. Global stocks of the substance declined as well, from 139 kg in 2012 to 76 kg in 2013, with almost all of them being held in the United States (99 per cent). The United States continued to be the main user of the substance. Only one territory (Sint Maarten) reported importing the substance in 2013 (452 grams).

112. Butobarbital has been manufactured intermittently during the past decade. Manufacture of butobarbital was reported for 2008 only by Germany (117 kg) and for 2012 only by the United States (94 kg). In 2013, Germany reported manufacture of 85 kg and consumption of 66 kg of the substance. Global stocks of butobarbital increased from 106 kg in 2012 to 112 kg in 2013, with 60 per cent held by the United Kingdom and 39 per cent by Germany.

Barbiturates listed in Schedules II, III and IV

113. Of the 12 barbiturates listed in Schedules II, III and IV of the 1971 Convention, five substances, phenobarbital, pentobarbital, butalbital, barbital and amobarbital (in descending order) together accounted, on average, for 99 per cent of total yearly reported manufacture during the period 2004-2013. The shares of those 12 substances in total reported manufacture in 2013 are shown in figure 28. Phenobarbital remained the most widely manufactured barbiturate in 2013, accounting for 64 per cent of the total manufacture of the 12 barbiturates, followed by pentobarbital (16 per cent) and butalbital (9 per cent). China continued to be the leading manufacturer, accounting for 63 per cent of total manufacture of the entire group of barbiturates, followed by the United States (15 per cent), Germany (8 per cent), the Russian Federation (7 per cent), Japan (4 per cent) and Denmark (3 per cent) (see figure 29).

Figure 28. Barbiturates in Schedules II, III and IV: share of total reported manufacture, by substance, 2013

Figure 29. Barbiturates in Schedules II, III and IV: total reported manufacture, selected countries, 2013

Other sedative-hypnotics listed in Schedule IV

114. Four substances from the group of sedative-hypnotics in Schedule IV are neither barbiturates nor benzodiazepines: ethchlorvynol, ethinamate, methyprylon and zolpidem. Following a decision of the Commission on Narcotic Drugs in March 2013, GHB, which was initially added to Schedule IV in 2001, was rescheduled and moved to Schedule II of the 1971 Convention.

115. Zolpidem, which was brought under international control in 2001, is used mainly for the treatment of insomnia. In the period 2004-2013, global manufacture of the substance fluctuated widely, between 24.2 tons in 2007 and 50.5 tons in 2012; the 10-year average was 35 tons. Those fluctuations have reflected the changing outputs of the main manufacturing countries, namely, France, India and Israel. Total reported manufacture of zolpidem decreased sharply after 2012, falling to a record low of 21.7 tons (2.2 billion S-DDD) in 2013, of which France accounted for 11.1 tons, the Czech Republic for 5 tons and Canada for 2.4 tons. Israel, which had manufactured 12.3 tons in 2012, reported manufacture of only 1.3 tons in 2013, while India, which had manufactured 18.2 tons in 2012, did not report its manufacture data for 2013. Global stocks of zolpidem decreased from 30.8 tons in 2012 to 24.4 tons in 2013 (2.4 billion S-DDD). Most of the stocks (71 per cent) were held in France, Israel and the United States (in descending order).

116. Zolpidem continues to be one of the most widely traded and most widely used psychotropic substances. Global reported exports, which had averaged about 50 tons annually during the period 2010-2012, amounted to 43.2 tons in 2013. With 15.6 tons, India remained the largest exporter, accounting for 36 per cent of global exports in 2013. Other significant exporters in 2013 were France (7.9 tons), the Czech Republic (6.7 tons), Canada (2.6 tons) and Israel (also 2.6 tons), together accounting for 46 per cent of global exports. As in previous years, about 100 countries reported imports of zolpidem in 2013. The United States, France, Japan, Canada, Argentina and Spain, in descending order, had the highest levels of calculated consumption in 2013.

Part three

Table IV. Levels of consumption of groups of psychotropic substances in defined daily doses for statistical purposes (S-DDD) per thousand inhabitants per day

The 1971 Convention does not foresee the reporting of consumption of psychotropic substances to the Board. Levels of consumption of groups of psychotropic substances in defined daily doses for statistical purposes (S-DDD) per thousand inhabitants per day have therefore been calculated on the basis of statistics on manufacture and trade provided by Governments. To exclude the impact of yearly fluctuations on the calculated annual consumption, the average for the three-year period 2011-2013 was calculated. In countries that do not manufacture and export psychotropic substances, quantities declared as imported are considered to be destined for consumption. For countries with manufacture and exports of psychotropic substances, the average annual manufacture is added to the average annual import; the average annual export and amounts of psychotropic substances used for conversion into other psychotropic or non-psychotropic substances are deducted. Countries and territories are presented in order of descending levels of consumption expressed in numbers of defined daily doses consumed on average per day and per thousand inhabitants. The names of territories appear in italics.

Conclusions on the actual level of consumption of psychotropic substances should be drawn with caution as data on manufacture and trade reported by Governments may not be complete or may not

cover all substances. High levels of consumption may, however, indicate over-prescription and/or diversion into illicit channels. The Governments concerned should review the data. The groups of psychotropic substances are presented in table III.2.

Pursuant to Commission on Narcotic Drugs resolution 54/6, which encourages Member States to report to the International Narcotics Control Board data on the consumption of psychotropic substances, Governments have started to submit such data for the years 2010, 2011, 2012 and 2013. The amount of data received cannot yet lead to a comprehensive comparison of consumption levels of psychotropic substances between countries or years. The Board therefore decided to continue to publish, in this edition of the technical publication on psychotropic substances, the calculated consumption levels of psychotropic substances based on the statistics submitted by Governments in form P. Nevertheless, since the data on consumption received from Governments are sometimes quite different from the calculated consumption data, and since the reported consumption levels are considered more accurate than the consumption levels calculated by the Board, the Board has shown the levels of reported consumption of psychotropic substances, when such data have been received, together with the levels of calculated consumption.

^aIn the past, the Board calculated one S-DDD to be equal to 1.2 mg of buprenorphine, a measure that reflected the dosage units used for treatment of pain in the late 1990s. In view of the increasing use of higher dosage units of buprenorphine for the treatment of pain and opioid dependence, the Board decided to calculate, as of 2010, one S-DDD to be equal to 8 mg of buprenorphine. Data on buprenorphine expressed in S-DDD in this publication are therefore not comparable with the corresponding data shown for previous years. — Par le passé, l'OICS se fondait, pour la buprénorphine, sur une S-DDD de 1,2 mg, ce qui correspondait à la dose utilisée pour le traitement de la douleur à la fin des années 90. Considérant l'emploi de plus en plus fréquent de doses supérieures pour le traitement de la douleur et de la dépendance aux opioïdes, l'OICS a décidé de se fonder, à compter de 2010, sur une S-DDD de 8 mg. Les données relatives à la buprénorphine qui sont exprimées en S-DDD dans la présente publication ne sont donc pas comparables avec les données correspondantes qui figurent dans les publications des années précédentes. — Anteriormente la Junta calculaba que una S-DDD equivalía a 1,2 miligramos de buprenorfina, cantidad que reflejaba las unidades de dosificación utilizadas para el tratamiento del dolor a finales del decenio de 1990. Debido al uso cada vez más generalizado de unidades de dosificación de buprenorfina más altas para el tratamiento del dolor y la dependencia a los opioïdes, la Junta decidió calcular, a partir de 2010, que una S-DDD equivale a 8 miligramos de buprenorfina. Por tanto, los datos sobre la buprenorfina expresados en S-DDD en la presente publicación no son comparables a los datos correspondientes a años anteriores.

^bThe consumption could have been reported for 2010, for 2011, for 2012, for 2013 or for all four years. — Des données sur la consommation ont pu être communiquées pour 2010, pour 2011, pour 2012, pour 2013 ou pour ces quatre années. — Los datos sobre el consumo podrían haberse comunicado respecto de 2010, de 2011, de 2012, de 2013 o de los cuatro años.

^cSince 25 October 2013, "Cabo Verde" has replaced "Cape Verde" as the short name used in the United Nations. — Depuis le 25 octobre 2013, "Cabo Verde" est la forme courte utilisée à l'Organisation des Nations Unies à la place de "Cap-Vert".

Table V. Assessments of annual medical and scientific requirements for substances listed in Schedules II, III and IV of the Convention on Psychotropic Substances of 1971

Assessments of annual medical and scientific requirements for substances listed in Schedules II, III and IV of the Convention on Psychotropic Substances of 1971 are published in accordance with the provisions of Economic and Social Council resolutions 1981/7 of 6 May 1981 and 1991/44 of 21 June 1991. The Council requested Governments to assess, from time to time, their annual requirements and to submit the assessments to INCB for publication.

The reported medical and scientific requirements are intended to supplement the import and export control system for international trade established in article 12 of the 1971 Convention. The reported assessments are intended to assist the national authorities of exporting countries in ascertaining whether a requested import appears to be excessive in comparison with a reported annual requirement for that country. If that is the case, the export should be denied until the designated national authorities of the importing country confirm the legitimacy of the import request and authenticate the import documents. It is expected that scrupulous adherence to this procedure will substantially diminish attempts at diversion, especially those involving very large quantities.

The countries and territories that have submitted assessments for psychotropic substances are presented in English alphabetical order. The names of territories appear in italics. The names of countries and territories are those that were in official use at the time the data were collected (in 2013).

Pursuant to Economic and Social Council resolution 1996/30 of 24 June 1996, INCB established assessments of annual licit requirements of psychotropic substances for countries that have not yet submitted such information. In the table below, assessments established by INCB are indicated by footnote ^(a).

The assessments established by INCB reflect previous patterns of use of psychotropic substances in the respective countries. They should not be considered as recommended consumption levels. The only objective of these assessments is to provide exporting countries with approximate information on legitimate requirements of the importing country. The Board encourages all Governments concerned to establish their own assessments as soon as possible.

Exporting countries should note that importing countries are free to replace any substance for which an assessment has been established by INCB with another substance from the same therapeutic group and the same schedule, provided that the quantity to be imported, expressed in defined daily doses for statistical purposes (S-DDDs), does not exceed the equivalent of the assessment also expressed in S-DDDs. The composition of the respective therapeutic groups and the S-DDDs of the substances in those groups are indicated in table III.2 of the present publication.

Table VI. Prohibition of and restrictions on export and import pursuant to article 13 of the Convention on Psychotropic Substances of 1971

The Secretary-General has transmitted to all Governments notifications concerning the prohibition of the importation of specific substances in Schedules II, III or IV of the Convention on Psychotropic Substances of 1971 that were received from the countries indicated in the table below. The notifications are presented as follows: notifying countries listed alphabetically, followed by the prohibited substances and dates of notification. The prohibitions are effective, with respect to exporting

countries, as of the date of receipt of the Secretary-General's notification.

Upon notification of a prohibition, an exporting country must take measures to ensure that none of the substances specified in the notification are exported to the country or any of the regions in the notifying country. Exports of a prohibited substance may be permitted only when a special import licence has been issued by the notifying country, in accordance with the provisions of article 13 of the 1971 Convention.

Tables of reported statistics

The tables in the present section contain the statistical information on psychotropic substances in Schedules I-IV of the 1971 Convention furnished to INCB by Governments in accordance with article 16 of the Convention. As few Governments have reported the movement of substances listed in Schedule I, a brief statistical table, including statistics on total manufacture of those substances for the three-year period 2010-2012 and on stocks of and international trade in those substances for 2012, is provided. With regard to the statistical tables for substances in Schedules III and IV, it should be noted that, although the majority of countries and territories reported on substances in all schedules, some Governments have not yet extended the control measures of the 1971 Convention to all of the substances listed in Schedules III and IV. Therefore, for certain substances, the statistical data available to INCB may present only a partial picture of the global manufacture of and trade in those substances.

With respect to substances in Schedules I and II, Governments are requested by INCB to report quantities in grams. While the gram (g) is the unit of weight used in the statistics on substances in Schedule I, the kilogram (kg) is the unit of weight used for the statistics on substances in Schedules II, III and IV. If a country has reported the movement of less than 500 grams of a substance in Schedule II, that information has not been included in the statistical tables. However, such small quantities, as well as fractions of kilograms, have been considered when calculating the total manufacture, import and export of each substance. Therefore, for substances in Schedule II, the total generally exceeds the sum of the individual quantities expressed in full kilograms.

For substances in Schedule II, the presentation of the statistical data is made substance by substance. For each substance, the first part refers exclusively to data obtained from manufacturing countries. The second and third parts refer to international trade. For substances in Schedule III, the manufacture of all substances is presented in the first part, while the second and third parts show international trade in all substances. For Schedules II and III, data for the

years 2008-2012 are presented. Tables for substances in Schedule IV contain data for the years 2010-2012 only. For technical reasons, substances in Schedule IV were divided into the following five groups for the presentation of data on manufacture and international trade:

- Group I: Central nervous system stimulants;
- Group II: Anxiolytics, first part:
main benzodiazepines and meprobamate;
- Group III: Anxiolytics, second part:
less common benzodiazepines;
- Group IV: Benzodiazepines:
sedative-hypnotics and anti-epileptics;
- Group V: Sedative-hypnotics and barbiturate-type
anti-epileptics.

Amineptine, aminorex, 4-bromo-2,5-dimethoxyphenethylamine (2C-B), camazepam, ethchlorvynol, ethinamate, etilamfetamine, fencamfamin, lefetamine (SPA), mefenorex, mesocarb, methyprylon, phenmetrazine and pyrovalerone were not included in any table since reports on these substances have been very limited.

The following symbols are used in the tables:

A dash (—) indicates nil or less than 500 grams in the case of substances in Schedule II, III or IV (less than 1 milligram in the case of substances in Schedule I);

A question mark (?) indicates that a statistical report was not furnished;

Two dots (. .) indicate that a statistical report was furnished but data are not available for the substance in question.

^aThe Netherlands Antilles was dissolved on 10 October 2010, resulting in two new constituent entities, Curaçao and Sint Maarten. — Les Antilles néerlandaises ont été dissoutes le 10 octobre 2010, donnant ainsi naissance à deux entités distinctes, Curaçao et Saint-Martin (partie néerlandaise). — Las Antillas Neerlandesas quedaron disueltas el 10 de octubre de 2010 y pasaron a ser dos nuevas entidades autónomas: Curaçao y Sint Maarten.

Annex IV

Substances in Schedule IV of the 1971 Convention, 2011-2013

Table A.IV.1. Central nervous system stimulants: manufacture, exports and imports	314
Table A.IV.2. Anxiolytics—the main benzodiazepines and meprobamate: manufacture, exports and imports	322
Table A.IV.3. Anxiolytics—less common benzodiazepines: manufacture, exports and imports	344
Table A.IV.4. Benzodiazepines—sedative-hypnotics and anti-epileptics: manufacture, exports and imports.....	354
Table A.IV.5. Sedative-hypnotics and barbiturate-type anti-epileptics: manufacture, exports and imports	372

^aSince 25 October 2013, "Cabo Verde" has replaced "Cape Verde" as the short name used in the United Nations. — Depuis le 25 octobre 2013, "Cabo Verde" est la forme courte utilisée à l'Organisation des Nations Unies à la place de "Cap-Vert".

About the International Narcotics Control Board

The International Narcotics Control Board (INCB) is an independent and quasi-judicial control organ, established by treaty, for monitoring the implementation of the international drug control treaties. It had predecessors under the former drug control treaties as far back as the time of the League of Nations.

Composition

INCB consists of 13 members who are elected by the Economic and Social Council and who serve in their personal capacity, not as Government representatives. Three members with medical, pharmacological or pharmaceutical experience are elected from a list of persons nominated by the World Health Organization (WHO) and 10 members are elected from a list of persons nominated by Governments. Members of the Board are persons who, by their competence, impartiality and disinterestedness, command general confidence. The Council, in consultation with INCB, makes all arrangements necessary to ensure the full technical independence of the Board in carrying out its functions. INCB has a secretariat that assists it in the exercise of its treaty-related functions. The INCB secretariat is an administrative entity of the United Nations Office on Drugs and Crime, but it reports solely to the Board on matters of substance. INCB closely collaborates with the Office in the framework of arrangements approved by the Council in its resolution 1991/48. INCB also cooperates with other international bodies concerned with drug control, including not only the Council and its Commission on Narcotic Drugs, but also the relevant specialized agencies of the United Nations, particularly WHO. It also cooperates with bodies outside the United Nations system, especially the International Criminal Police Organization (INTERPOL) and the World Customs Organization.

Functions

The functions of INCB are laid down in the following treaties: the Single Convention on Narcotic Drugs of 1954 as amended by the 1972 Protocol; the Convention on Psychotropic Substances of 1971; and the United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988. Broadly speaking, INCB deals with the following:

(a) As regards the licit manufacture of, trade in and use of drugs, INCB endeavours, in cooperation with Governments, to ensure that adequate supplies of drugs are available for medical and scientific uses and that the diversion of drugs from licit sources to illicit channels does not occur. INCB also monitors Governments' control over chemicals used in the illicit manufacture of drugs and assists them in preventing the diversion of those chemicals into the illicit traffic;

(b) As regards the illicit manufacture of, trafficking in and use of drugs, INCB identifies weaknesses in national and international control systems and contributes to correcting such situations. INCB is also responsible for assessing chemicals used in the illicit manufacture of drugs, in order to determine whether they should be placed under international control.

In the discharge of its responsibilities, INCB:

(a) Administers a system of estimates for narcotic drugs and a voluntary assessment system for psychotropic substances and

monitors licit activities involving drugs through a statistical returns system, with a view to assisting Governments in achieving, inter alia, a balance between supply and demand;

(b) Monitors and promotes measures taken by Governments to prevent the diversion of substances frequently used in the illicit manufacture of narcotic drugs and psychotropic substances and assesses such substances to determine whether there is a need for changes in the scope of control of Tables I and II of the 1988 Convention;

(c) Analyses information provided by Governments, United Nations bodies, specialized agencies or other competent international organizations, with a view to ensuring that the provisions of the international drug control treaties are adequately carried out by Governments, and recommends remedial measures;

(d) Maintains a permanent dialogue with Governments to assist them in complying with their obligations under the international drug control treaties and, to that end, recommends, where appropriate, technical or financial assistance to be provided.

INCB is called upon to ask for explanations in the event of apparent violations of the treaties, to propose appropriate remedial measures to Governments that are not fully applying the provisions of the treaties or are encountering difficulties in applying them and, where necessary, to assist Governments in overcoming such difficulties. If, however, INCB notes that the measures necessary to remedy a serious situation have not been taken, it may call the matter to the attention of the parties concerned, the Commission on Narcotic Drugs and the Economic and Social Council. As a last resort, the treaties empower INCB to recommend to parties that they stop importing drugs from a defaulting country, exporting drugs to it or both. In all cases, INCB acts in close cooperation with Governments.

INCB assists national administrations in meeting their obligations under the conventions. To that end, it proposes and participates in regional training seminars and programmes for drug control administrators.

Reports

The international drug control treaties require INCB to prepare an annual report on its work. The annual report contains an analysis of the drug control situation worldwide so that Governments are kept aware of existing and potential situations that may endanger the objectives of the international drug control treaties. INCB draws the attention of Governments to gaps and weaknesses in national control and in treaty compliance; it also makes suggestions and recommendations for improvements at both the national and international levels. The annual report is based on information provided by Governments to INCB, United Nations entities and other organizations. It also uses information provided through other international organizations, such as INTERPOL and the World Customs Organization, as well as regional organizations.

The annual report of INCB is supplemented by detailed technical reports. They contain data on the licit movement of narcotic drugs and psychotropic substances required for medical and scientific

purposes, together with an analysis of those data by INCB. Those data are required for the proper functioning of the system of control over the licit movement of narcotic drugs and psychotropic substances, including preventing their diversion to illicit channels. Moreover, under the provisions of article 12 of the 1988 Convention, INCB reports

annually to the Commission on Narcotic Drugs on the implementation of that article. That report, which gives an account of the results of the monitoring of precursors and of the chemicals frequently used in the illicit manufacture of narcotic drugs and psychotropic substances, is also published as a supplement to the annual report.
